CrewBoard user manual

Crew rotation and dispatch: every screen, every concept, and how to work with it.

Screenshots show the demo data that ships with the platform. Your own data will look the same but with your names, bases and units.

1. Start here

CrewBoard answers one question every day: **is every seat on every unit filled by the right person, and what do I do where it is not?**

What it does

- **Shows the day.** Every unit (truck / rig) with its crew, every base, and everyone who is free.
- **Shows what needs you.** An empty seat, a broken crew rule or a stay whose end date has passed is flagged on the board. *Assign someone* ranks the best people for a seat.
- **Never moves people on its own.** Nobody is taken off a unit until you unassign them.
- **Keeps the fleet in order.** Unit status, jobs, the workshop, preventive maintenance, papers (registration, insurance, inspection).
- **Shows where you will be short.** A few key numbers and the coverage of the next 12 weeks, base by base.

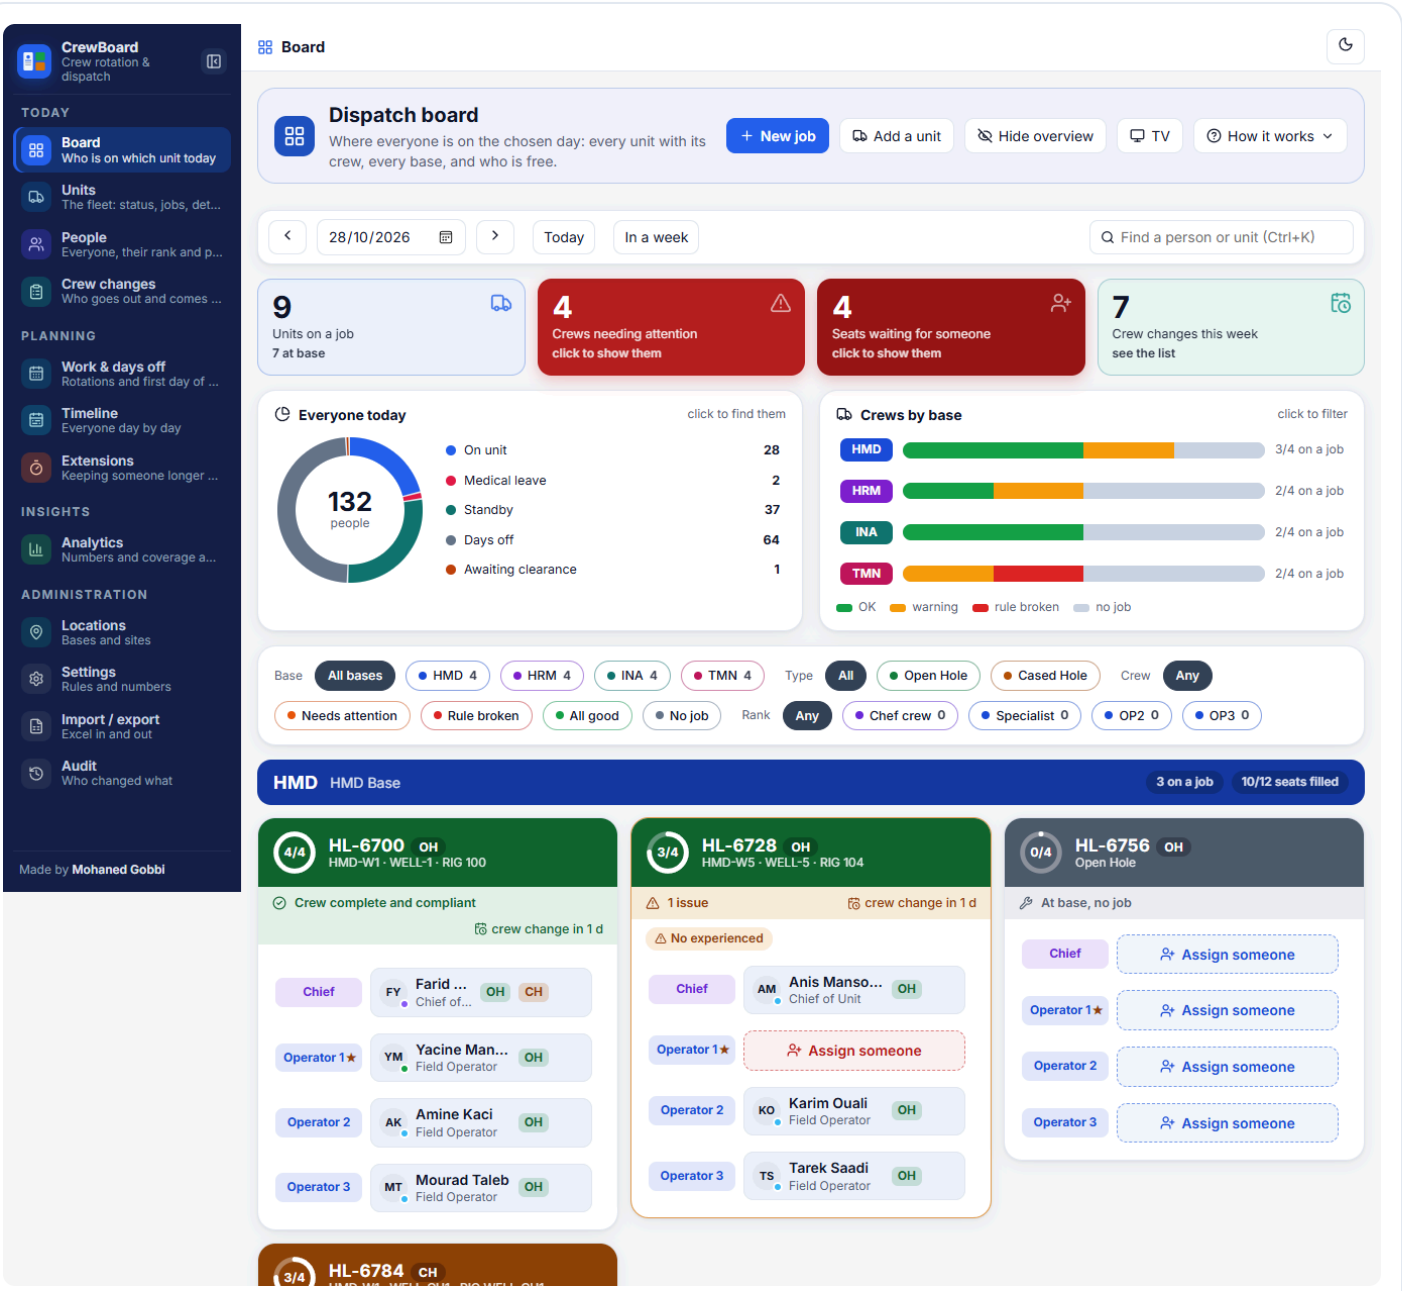

Who uses it

CrewBoard has **one user: the manager**, who plans, dispatches and decides everything. There are no other accounts, no sign-in and no employee app: CrewBoard is installed on the manager's computer and opens straight on the board.

Opening CrewBoard

1. Install it once with `CrewBoard Setup 1.0.0.exe`. It adds CrewBoard to the Start menu and the desktop.
2. Open **CrewBoard** from the Start menu or the desktop. It opens in its own window, on the board.
3. Close the window to stop it. Opening it again while it is open brings the window back.

2. Finding your way around

The sidebar on the left, the top bar on the right, and the page itself in the middle.

The sidebar

Screens are grouped by what you do with them. Each entry has a short description under its name.

GROUP	SCREENS
Today	Board, Units, People, Crew changes
Planning	Work & days off, Timeline, Extensions
Insights	Analytics
Administration	Locations, Settings, Import / export, Audit

Use the small button at the top of the sidebar to collapse it to icons. On a phone the sidebar becomes a menu you open with the menu button.

The top bar

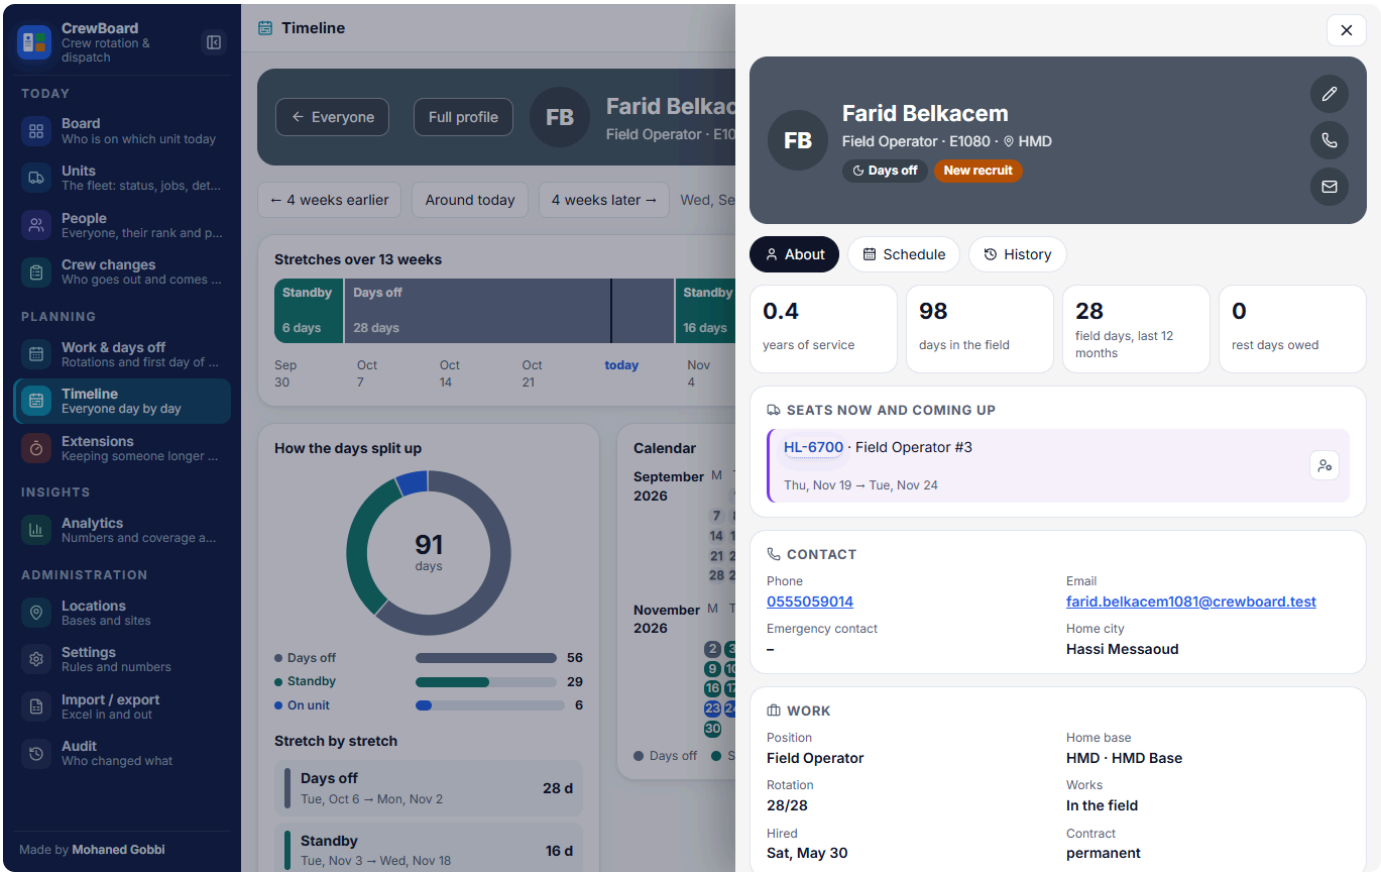

- **Moon / sun:** switch between light and dark appearance. CrewBoard remembers your choice; until you choose, it follows your computer.

Page guides

Every main screen starts with a short guide: one sentence on what the screen is for and numbered steps for how it works. It is open the first time you visit a screen and folded afterwards. Press **How it works** to open or fold it again.

Names and unit codes are links

Anywhere in CrewBoard, click a person's name to open their **profile panel** on the right (contact details, status, schedule, history), and click a unit code such as `HL-6700` to open that unit's panel (job, crew, maintenance, history). Press `Esc` to close a panel or dialog.

A person's profile panel, opened from a name.

Searching

On the board, press `Ctrl` + `K` or click the search box to find a person or a unit by name or code.

Live updates

Screens refresh by themselves when something changes (someone is assigned, a unit is sent on a job). You do not need to reload.

3. A day with CrewBoard

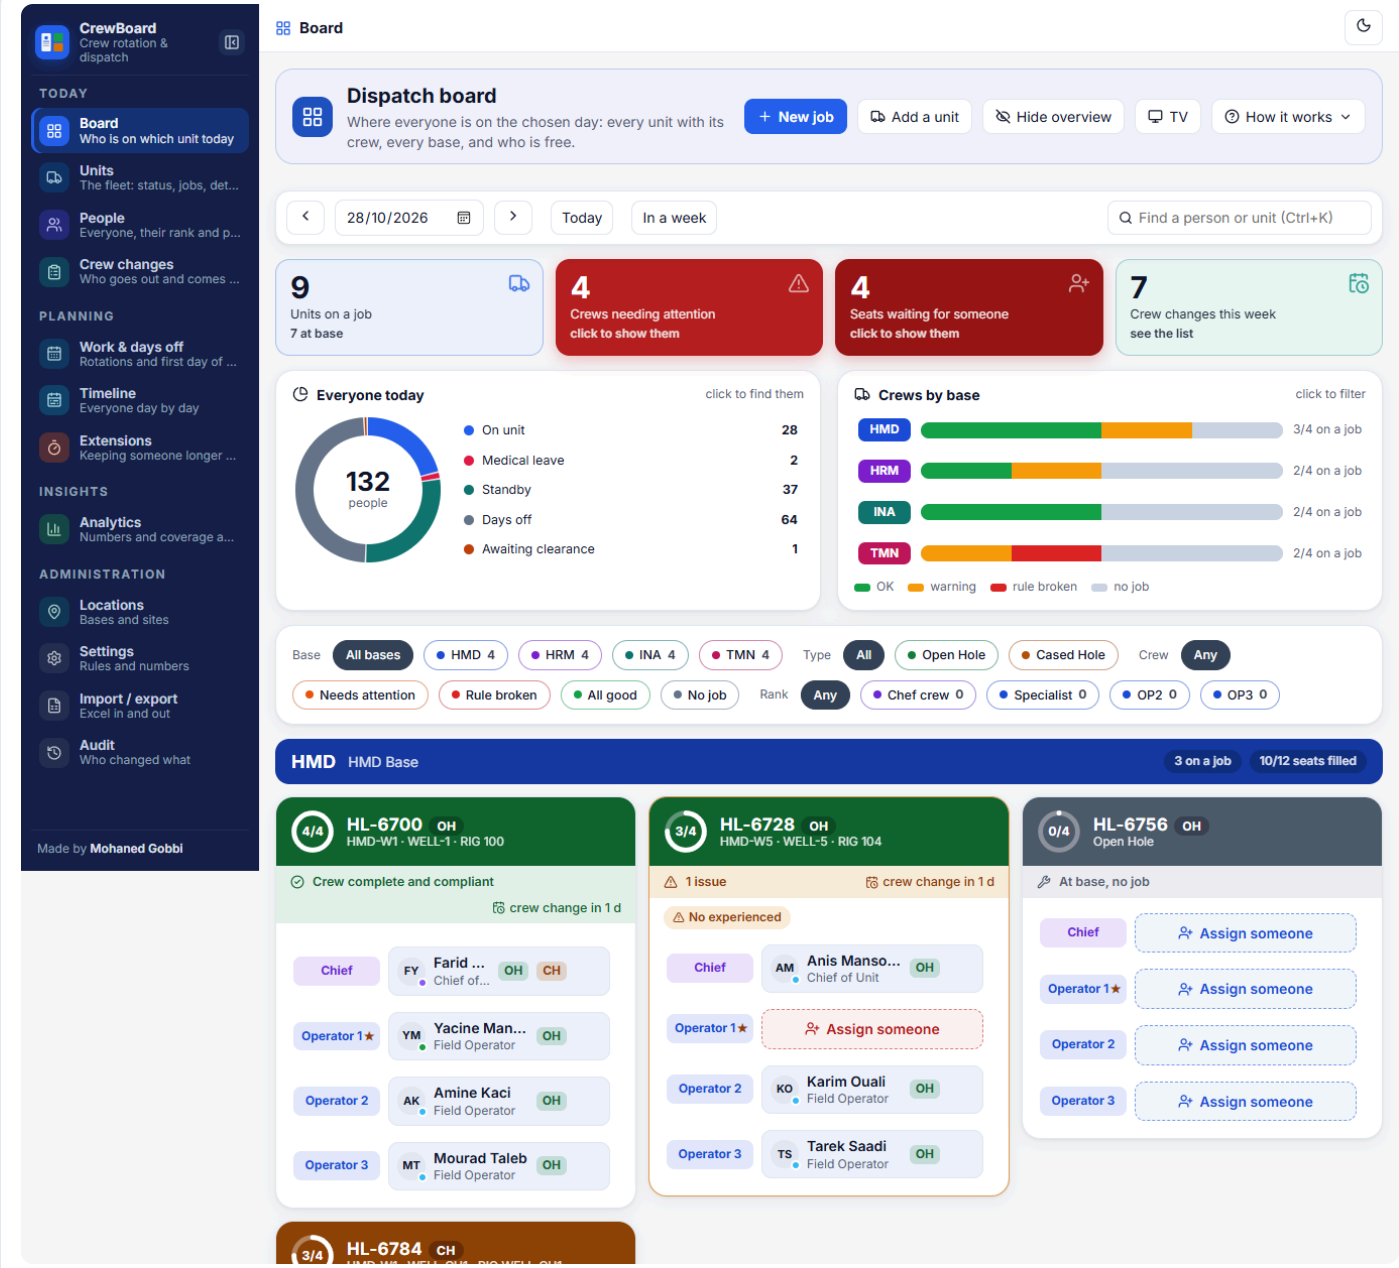

A typical morning for the manager:

1. **Open the Board.** Look at the red tiles first. They tell you how many crews need attention and how many seats are waiting for someone.
2. **Fill empty seats** with **Assign someone** on the seat: the best people are ranked for you.
3. **Look for "stay ended" warnings.** Those people are still on their seat because nobody has taken them off. Unassign them or set a new crew change date.
4. **Someone cannot work today?** Click them on the board and press **Unassign** (or **Replace** to put someone else in straight away).
5. **Look at Crew changes** for the coming days: green rows are settled, red rows have nobody coming yet.
6. **Glance at Units** for services due and papers expiring, and for units in the workshop.
7. **Once a week** open Analytics to see where you will be short of people.

> **Tip.** The thing that needs action today is always the loudest thing on screen. Red solid tiles mean "act now"; everything else is quiet on purpose.

Board

Where everyone is on the chosen day: every unit with its crew, every base, and who is free.

The top of the board: toolbar, summary tiles, map, "everyone today" donut and crew health per base.

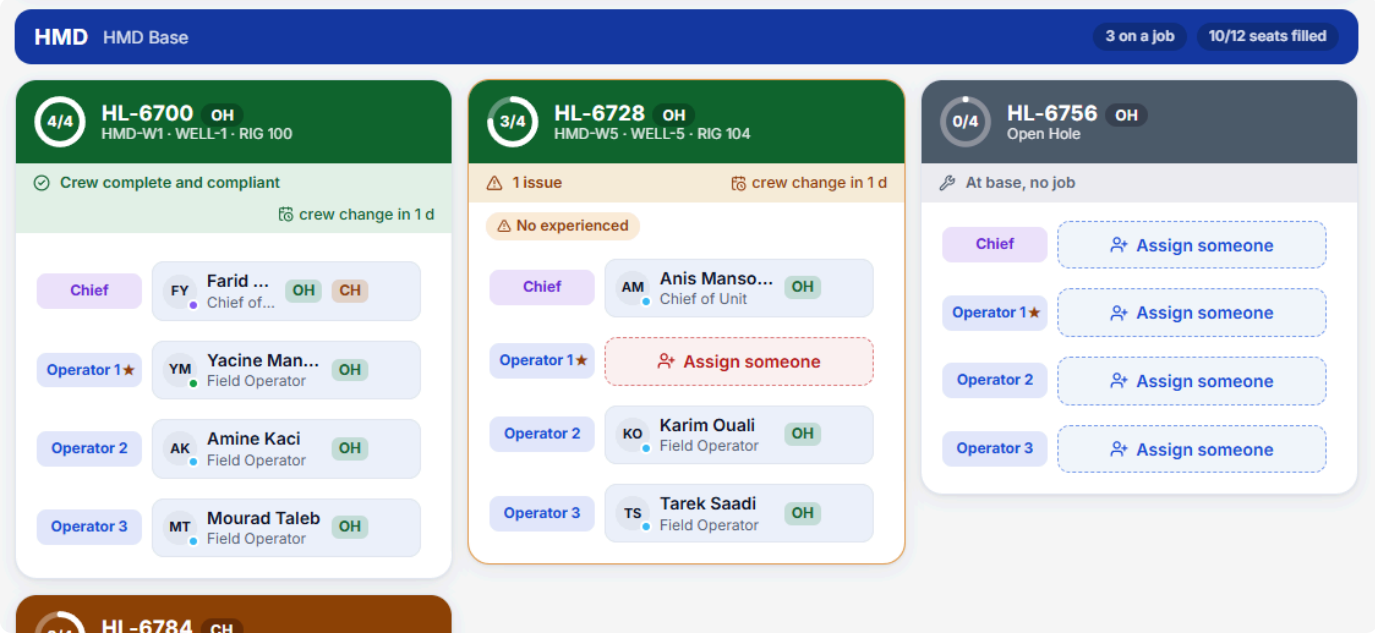

The toolbar

- **Date, arrows, Today, In a week**: look at any other day. The board then shows who held each seat on that day.
- **New job / Add a unit / Hide overview / TV / How it works**: create a job, add a unit, collapse the map and charts, show the wall display, open the guide.

The summary tiles

TILE	MEANING	CLICK TO
Units on a job	How many units are working today	Show units in the field
Crews needing attention	Crews that break a rule, have an empty required seat or have a stay that ended. Turns solid red when above zero.	Filter to those crews
Seats waiting for someone	Empty seats on units whose crew is too small	Filter to those crews
Crew changes this week	Handovers in the next seven days	Open Crew changes

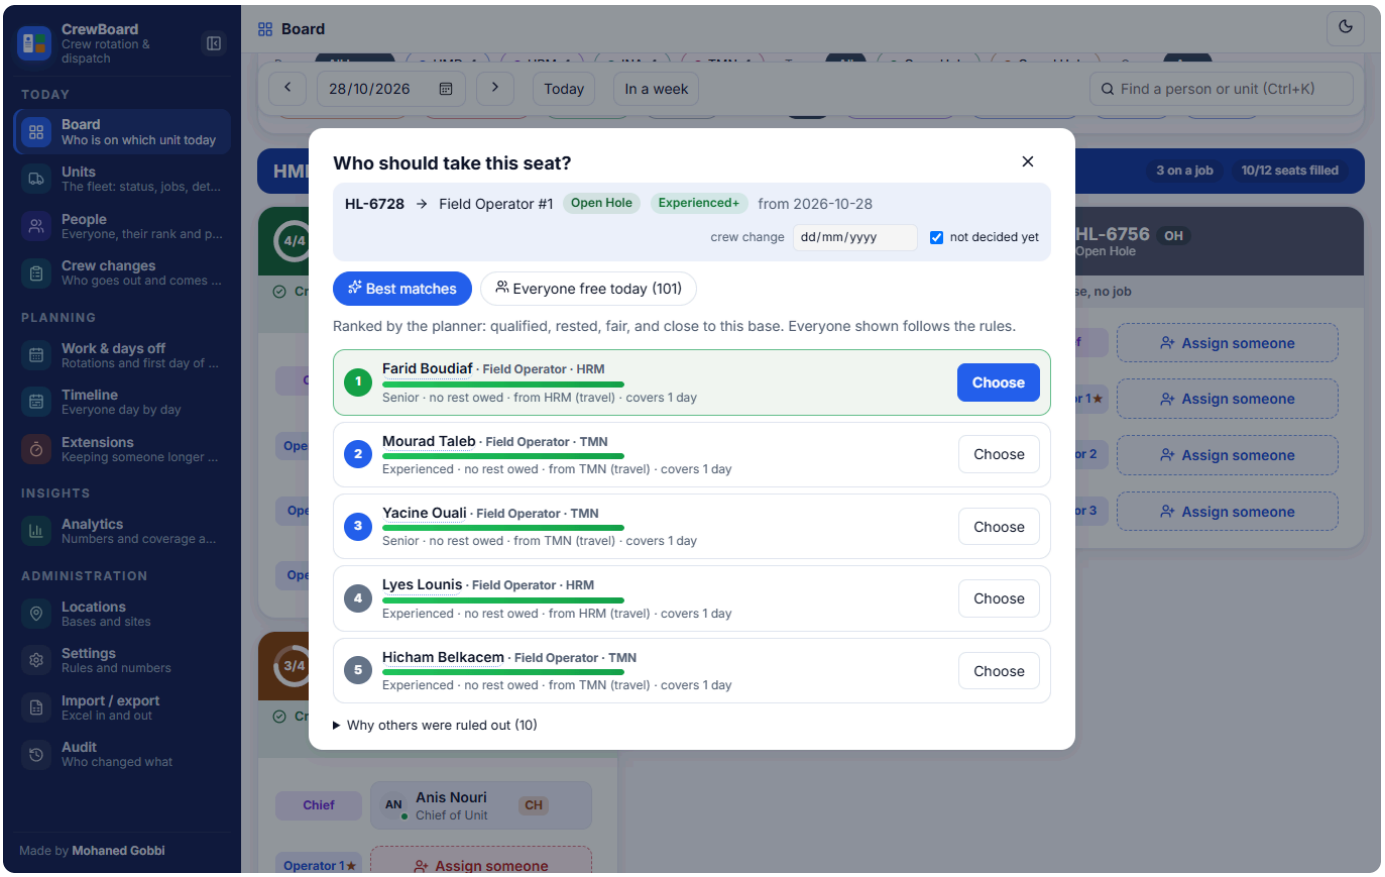

Reading a unit card

Unit cards under the HMD base banner.

- **Header colour:** green = Open Hole (OH), amber = Cased Hole (CH), grey = at base without a job. The ring shows seats filled (for example 3/4).
- **Status line:** "Crew complete and compliant", or the number of issues, or "At base, no job", or "Under maintenance". Also the next crew change ("crew change in 14 d").
- **Seats:** Chief and Operator 1 to 3 (a field operator is also the driver). The star on Operator 1 marks the seat that needs an experienced person. Each person shows initials, name, position and a small dot for their state today.
- **Warning chips:** each problem in words, for example "No chief of unit", "Missing OH qualification" or "1 stay ended: unassign".
- **Red outline:** the crew breaks a rule. Click the card header to read the issues in the unit panel.
- **"Assign someone":** an empty seat. A solid red-tinted one is an empty required seat.

Filling a seat

Press "Assign someone" and CrewBoard ranks the people who can take the seat.

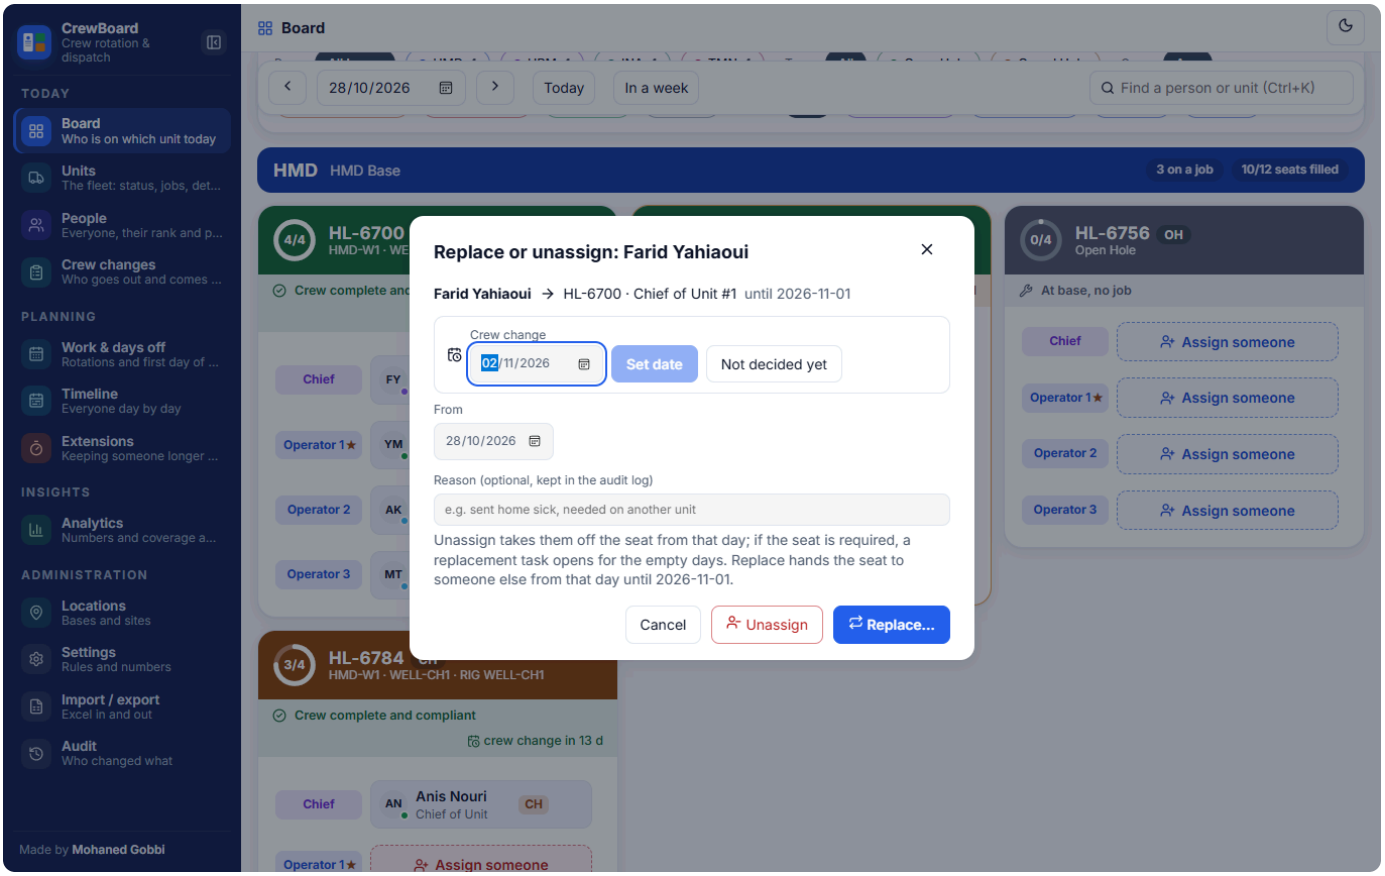

1. Press **Assign someone** on an empty seat.
2. At the top, pick the crew change date (the first day they are off the seat), or tick **not decided yet** when it is not known.
3. **Best matches** lists the people CrewBoard recommends: qualified, rested, fair and close to this base. Each line says why ("Experienced, no rest owed, same base, covers 7 days"). **Everyone free today** lists everybody available.
4. Press **Choose**. CrewBoard checks every crew rule before it saves.
5. "Why others were ruled out" explains who cannot take the seat and why.

You can also **drag** a person from the lanes at the bottom of the board (Standby, Days off) onto a seat.

Careful. If a choice would break a hard rule, CrewBoard stops you and asks for an **override reason**. The reason is stored in the audit log. Use overrides sparingly.

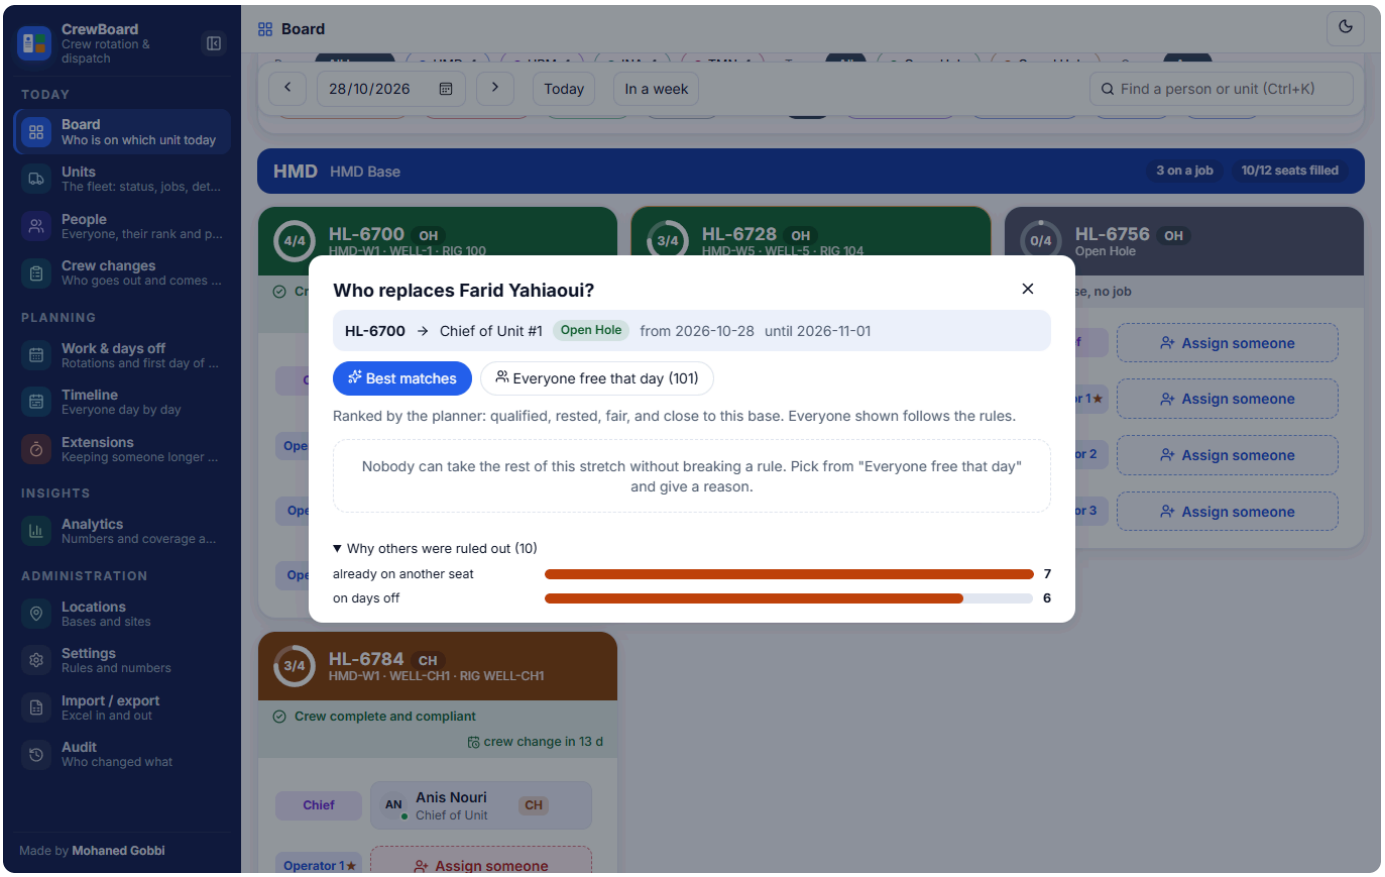

Replacing someone, or taking them off a seat

Click a person on a unit card (anywhere on their chip except the name, which opens their profile), or the small person-and-gear button that appears at the end of the row when you point at it.

Replace or unassign: choose the day (today by default) and, if you like, a reason.

1. **From:** the first day the change applies. It is today unless you pick another day, up to the end of the person's stretch on this seat.
2. **Reason** (optional): written to the audit log with the change.
3. **Unassign** takes the person off the seat from that day. If the seat is required, it shows as empty on the board.
4. **Replace…** opens the same ranked list as "Assign someone", for the rest of the stretch. Pick someone, check what would happen, and confirm. The person leaves the seat and the new one takes it the same day, in one step, so the seat is never left empty.

Choosing who replaces someone. When nobody fits every rule for the whole stretch, pick from "Everyone free that day" and give an override reason.

Crew change dates and "not decided yet"

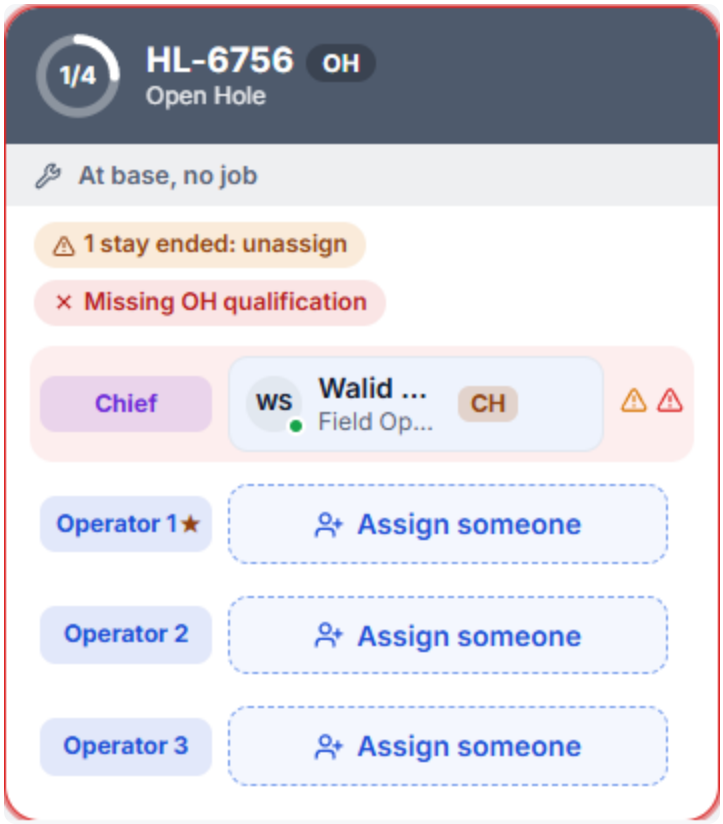

The same window sets the crew change: pick a date and press **Set date**, or press **Not decided yet** to remove the date. A person with no date shows "no crew change date yet" and stays on the seat until you set one or unassign them.

When a stay's end date passes

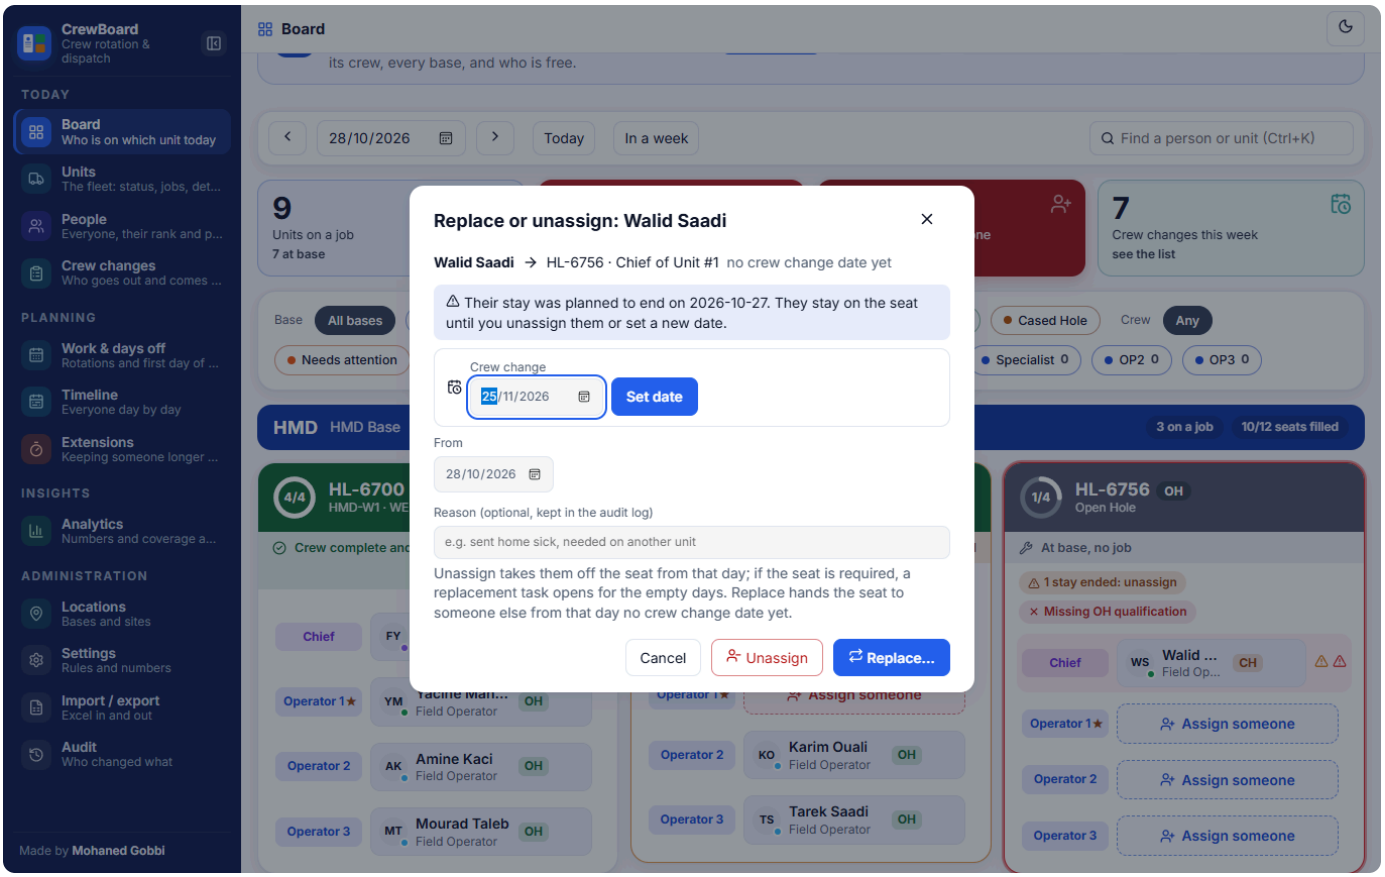

CrewBoard **never takes anyone off a unit by itself**. When the end date of a stay passes and nobody is lined up to take over the seat:

1. The person stays on the seat, with no date.
2. The unit shows an orange warning, "1 stay ended: unassign", and a warning sign on the seat. The crew counts as needing attention.

3. You decide: **Unassign**, **Replace**, or **Set date** for a new crew change. The warning goes away as soon as you do.

The warning on the unit card.

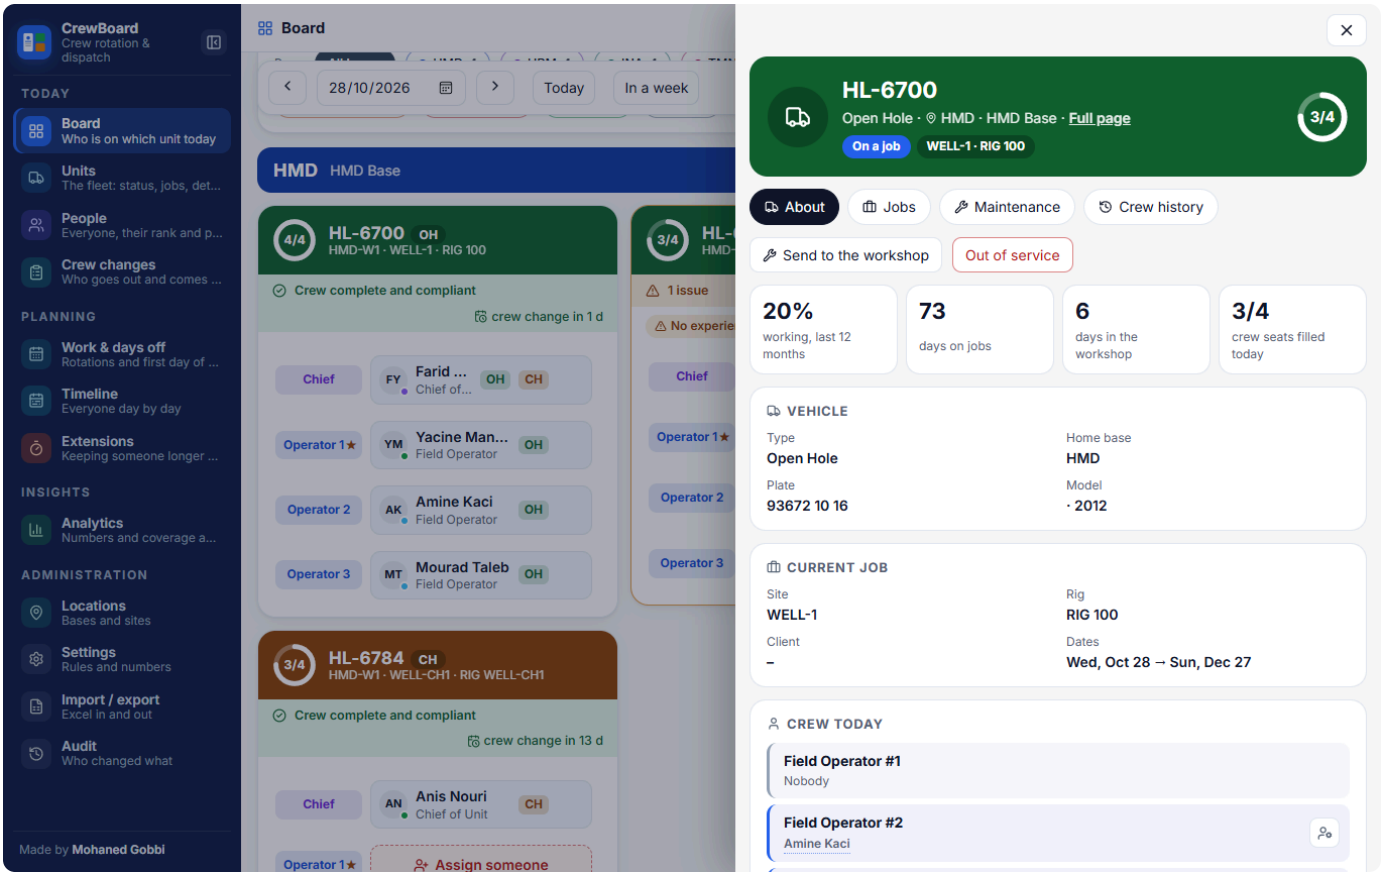

The person's window says when the stay was planned to end.

Good to know. If someone was already lined up for the seat after that date, or the person's next stay is planned elsewhere, the crew change happens as planned and no warning is shown.

The same actions are available wherever a person sits on a seat: in the **unit panel** (Crew today), on the **unit page** (Crew today table) and in the **person's profile panel** under "Seats now and coming up", which you can open from any name in CrewBoard.

The unit panel

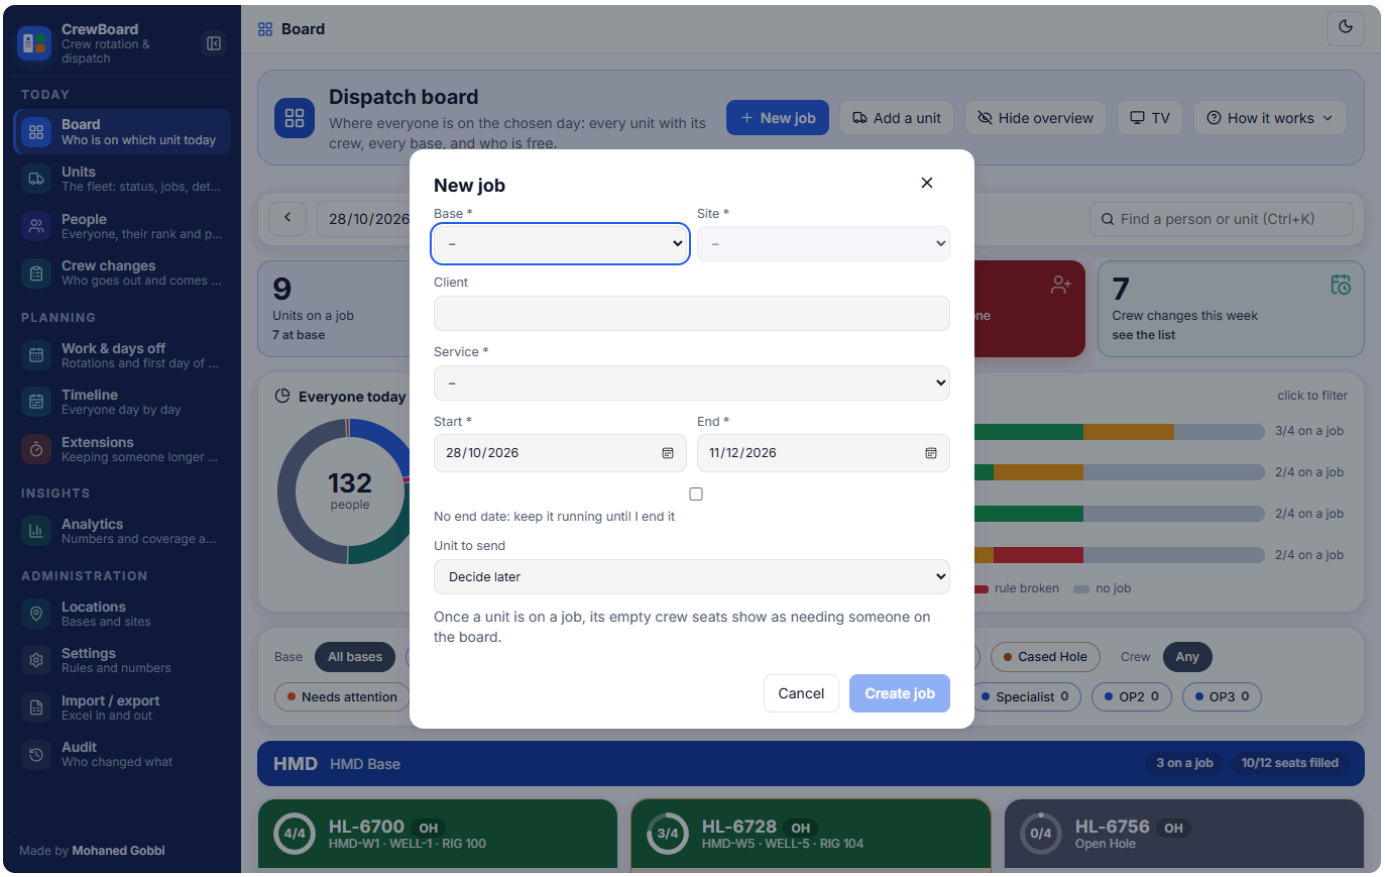

Click a unit card header to open its panel: job, crew, maintenance, jobs and crew history.

Filters and the overview

Click a base on the map, a slice of a chart or any coloured chip (base, Open Hole / Cased Hole, crew state) to filter the board. Press the chip again, or "All", to clear.

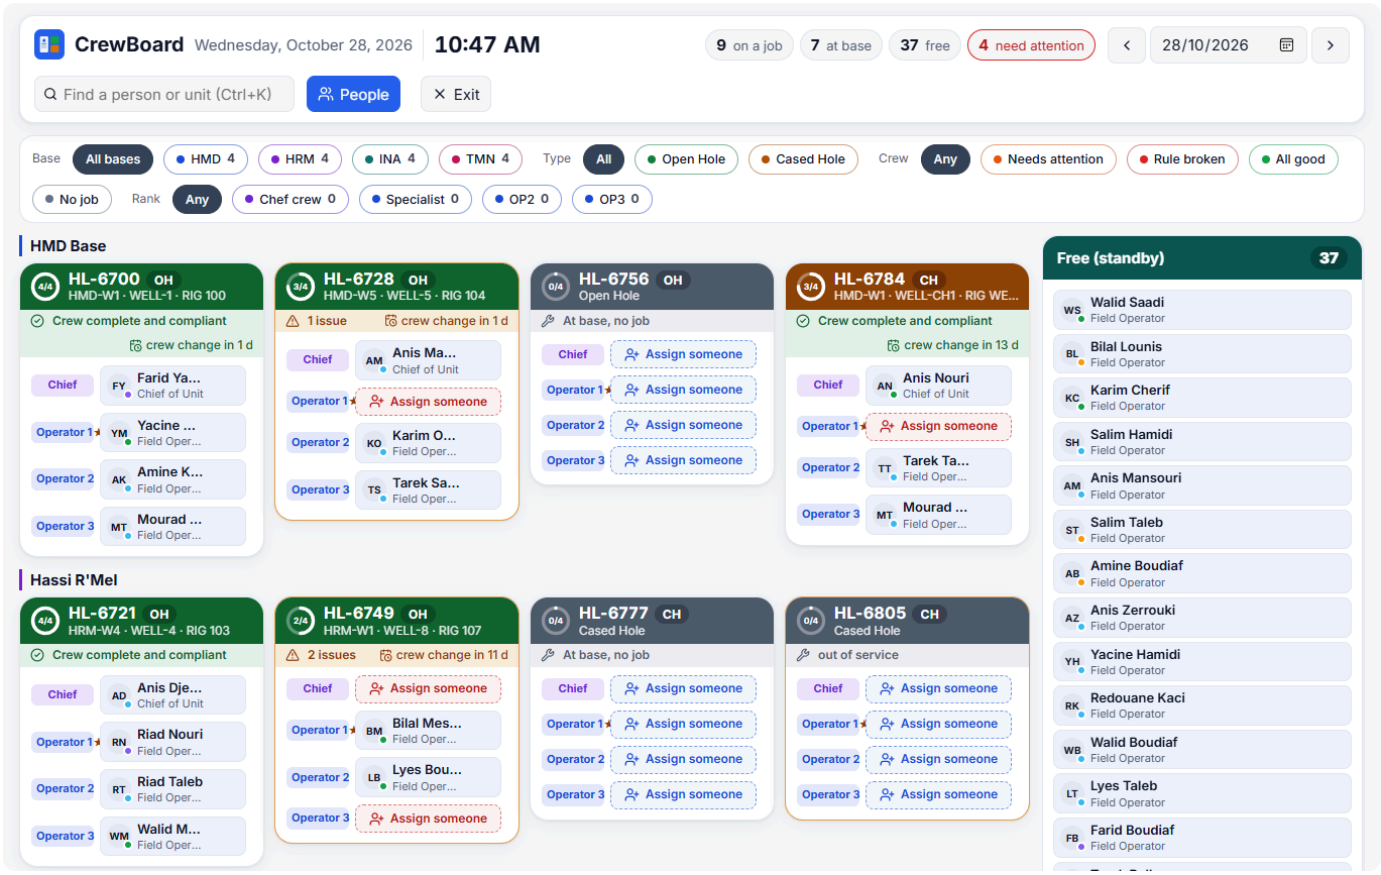

New job

Create a job and, optionally, deploy a unit on it straight away.

A job is a piece of work at a site (a well and rig) with start and end dates. If you deploy a unit with it, the unit's seats are needed for the job's dates and any empty one shows as needing someone on the board.

TV mode

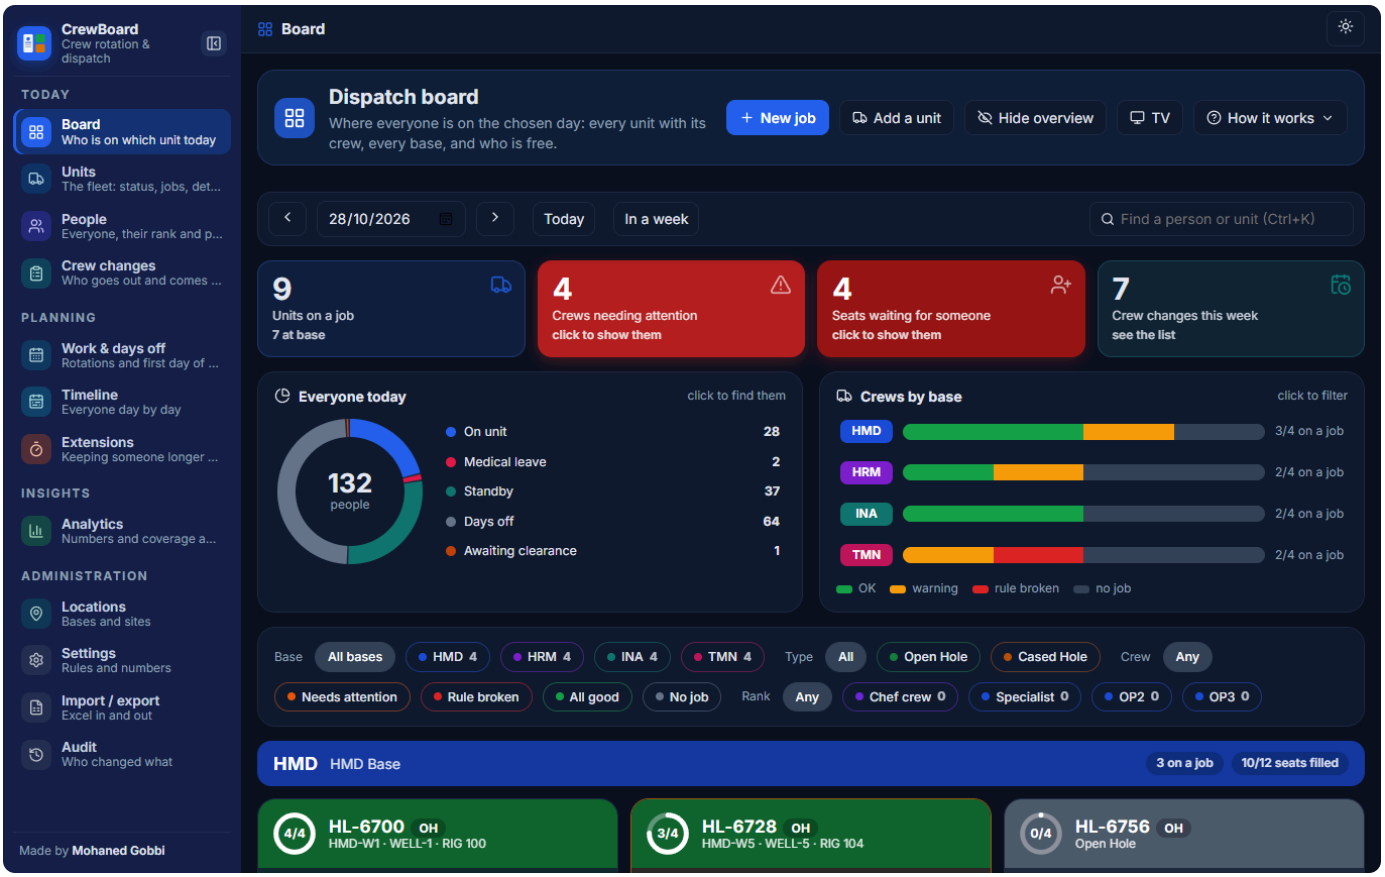

TV mode: a large, read-only wall display of the day. Press `Esc` to leave it.

Time machine

Move the date back to see who held a seat on a past day. This is built from the assignment records; if something was recorded late (for example someone taken off a past stretch afterwards), the past view may not show exactly what was on screen that day.

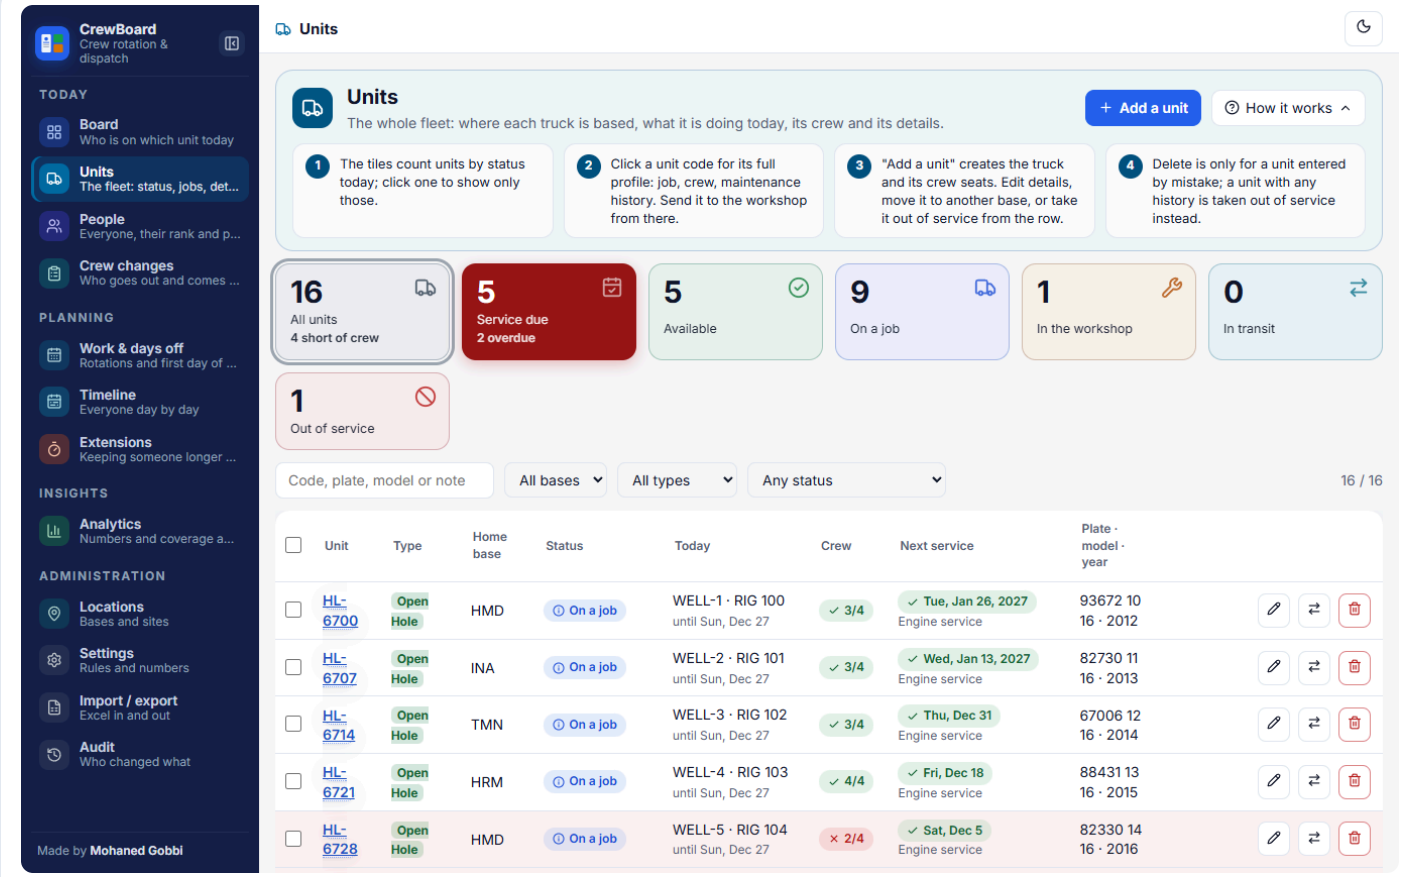

Dark mode

Dark appearance, useful for control rooms and night shifts.

Units

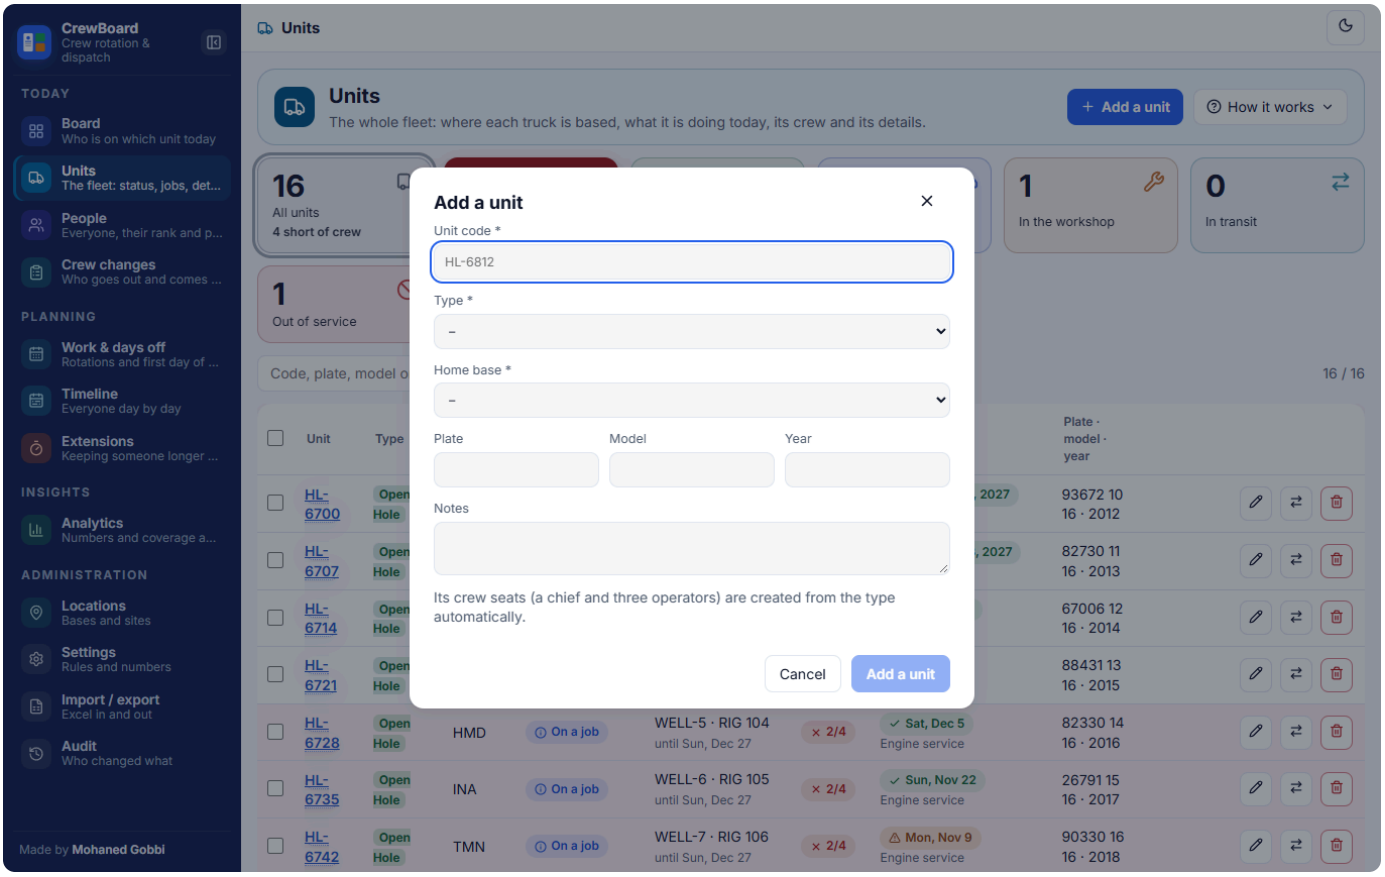

The whole fleet: where each truck is based, what it is doing today, its crew and its details.

The Units page with the page guide open.

- **Tiles** count units by status today (All, Service due, Available, On a job, In the workshop, In transit, Out of service). Click one to show only those. The Service due tile turns solid red when a service is overdue.
- **Search and filters**: code, plate, model or note; base; type; status.
- **The table** shows type, home base, status, today's job, crew filled, next service, plate, model and year.
- **Row buttons:** edit details, move to another base, send to the workshop (or mark repaired), out of service / back in service, delete.

Add a unit

Add a unit: code, type, home base and details. New units get the crew seats of their type.

Status of a unit

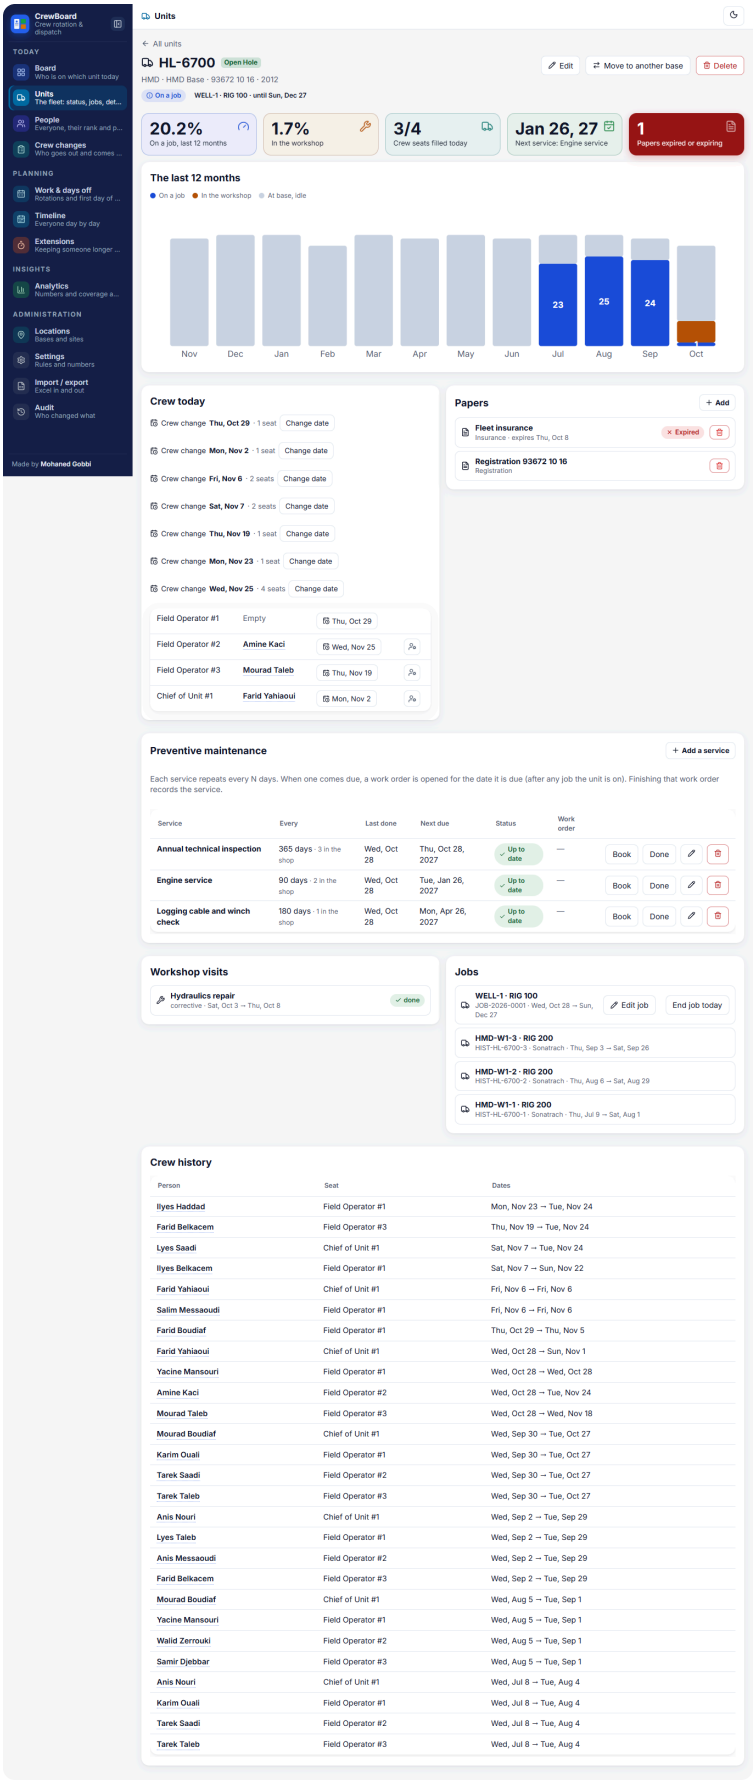

STATUS	MEANING
Available	At base, ready, no job
On a job	Deployed on a job today
In the workshop	Sent to the workshop with a return date; its crew seats are not needed
In transit	Moving to another base
Out of service	Retired or unusable; kept with its history

Good to know. Status is worked out from jobs and the workshop; you do not set "On a job" by hand. Create a job, or send the unit to the workshop, and the status follows.

Careful. **Delete** is only for a unit entered by mistake. A unit with any crew assignment, job or workshop visit cannot be deleted; CrewBoard offers **Out of service** instead.

The unit page

Click a unit code (or open the unit panel and follow its link) for the full unit page.

The full page of one unit.

- **Tiles:** share of the last 12 months on a job and in the workshop, crew seats filled today, next service, papers expired or expiring.
- **The last 12 months:** a bar per month, split into on a job (blue), in the workshop (orange) and at base (grey).
- **Crew today** and **Crew history**: who holds each seat now and who held it before. The button next to each person replaces or unassigns them (see Board, "Replacing someone").
- **Papers:** registration, insurance, technical inspection. Add one with its expiry date and attach the file; expired or soon-to-expire papers turn red.
- **Preventive maintenance:** a plan per service ("every 90 days"). When a service falls due, CrewBoard sends the unit to the workshop for the due date, after any job the unit is on. **Book** opens it early, **Done** records a service done elsewhere. Pressing Repaired on that visit records the service and sets the next due date.
- **Workshop visits** (with a Repaired button while one is open) and **Jobs** of this unit.
- **Edit, Move to another base, Delete** at the top.

Sending a unit to the workshop

1. On the Units page press the wrench on the unit (or use the unit panel).
2. Write a note and the expected return date.
3. CrewBoard marks the unit as in the workshop with that return date and stops requiring its crew seats.
4. When the work is finished, press **Repaired** on the unit (in its panel or on its page): the unit becomes available again.

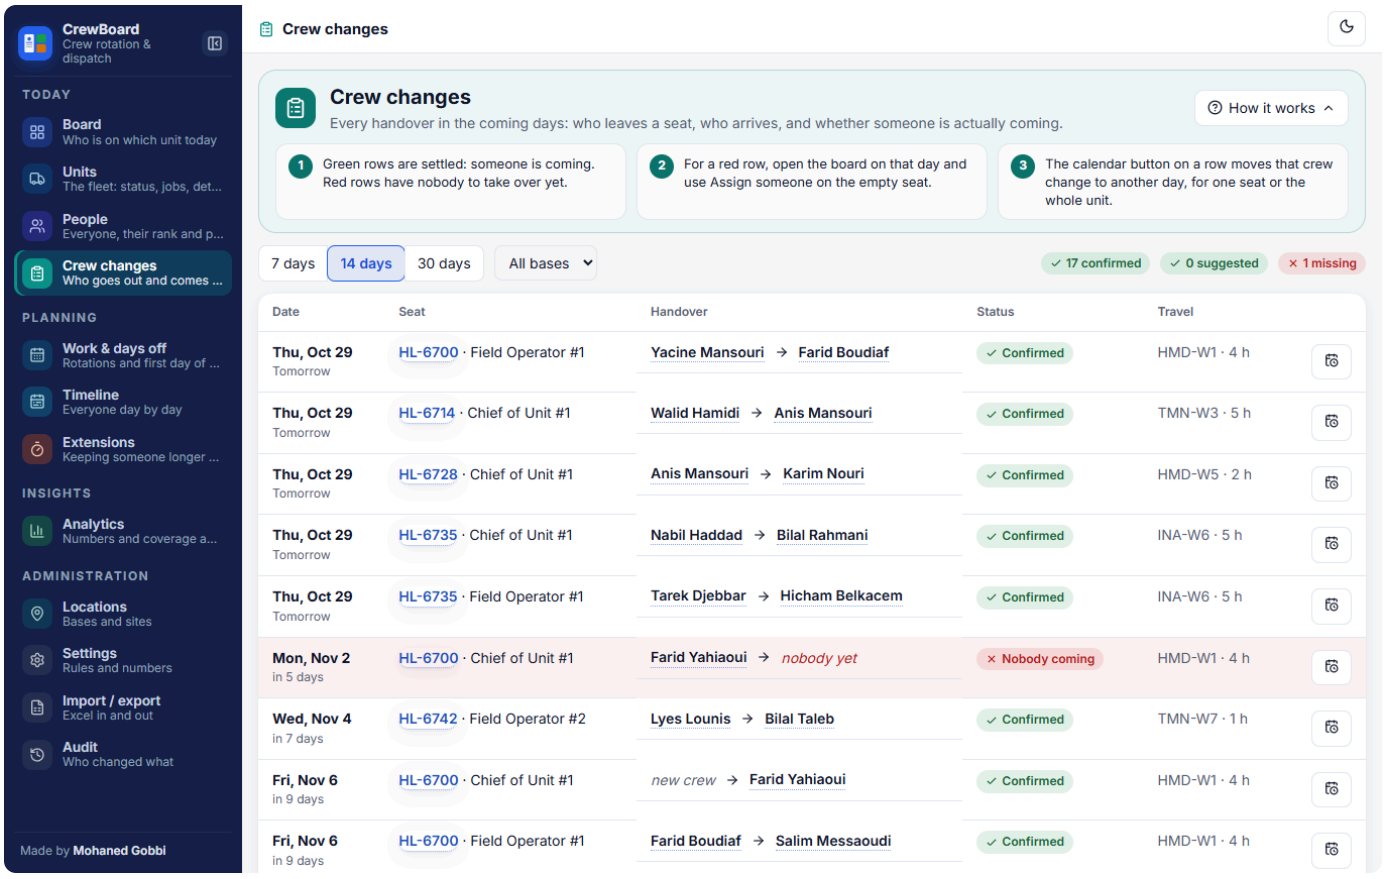

People

Everyone in the crews: their rank, back-to-back partner and details. Add or change anyone by hand.

- **Add a person**: first and last name, employee number, home base, rank, back-to-back partner, and optional contact details, hire date, contract and notes.
- **Rank** decides whether someone takes chief or operator seats and how experienced they count for the crew rules. **Ranks** lets you rename, add or reorder them. Without a rank, the level is worked out from the hire date.
- **Back-to-back partners** share a seat: one is on while the other is off. Setting a partner links both people.
- **Archive (left the company)** when someone leaves: their current and future seats are freed (they show as empty on the board) and their partner link is removed. Their history stays.

Crew changes

Every handover in the coming days: who leaves a seat, who arrives, and whether someone is actually coming.

Green rows are settled: someone is coming. Red rows have nobody to take over yet.

- For a red row, open the board on that day and use **Assign someone** on the empty seat.
- The calendar button on a row moves that crew change to another day, for one seat or the whole unit.
- Click a name to see the person's schedule.

Good to know. People with no crew change date yet are not listed: there is no handover planned. Set a date from the seat to bring them onto this list.

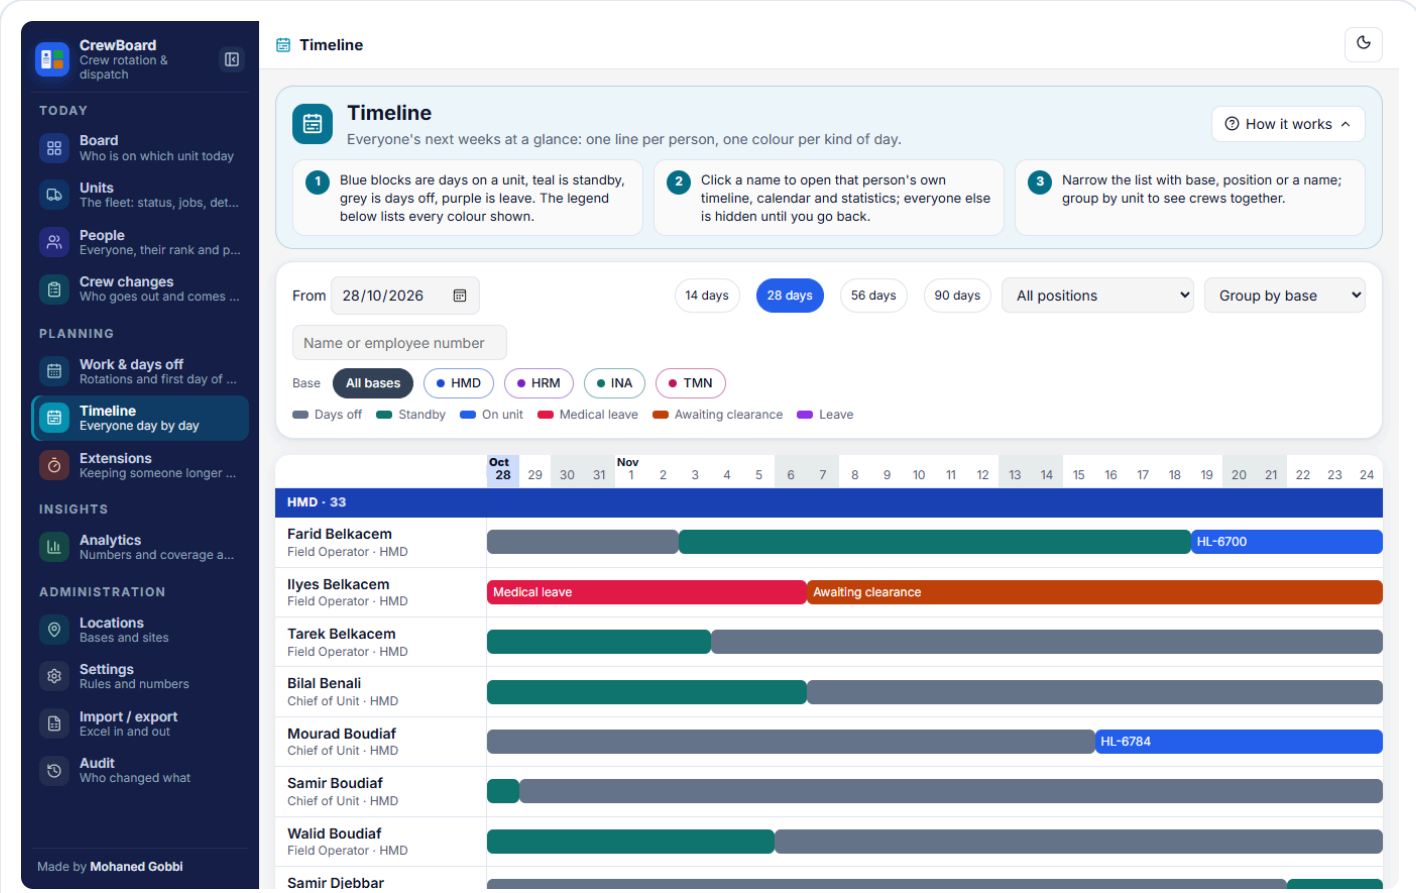

Work & days off

When each person works and when they are off. Set the rotation and the first day of one work stretch; CrewBoard works out every stretch after it.

- **Starting out**, nobody has a rotation yet. Under **Right now**, mark whether each person is working or on days off, so the board is right today.
- **Starts today** on the day someone goes back to work; **Off today** on the day they finish. Counting starts from there.
- **First day on** takes any date, past or future. Back-to-back partners are listed together and ⇄ gives the partner the opposite stretches.

Timeline

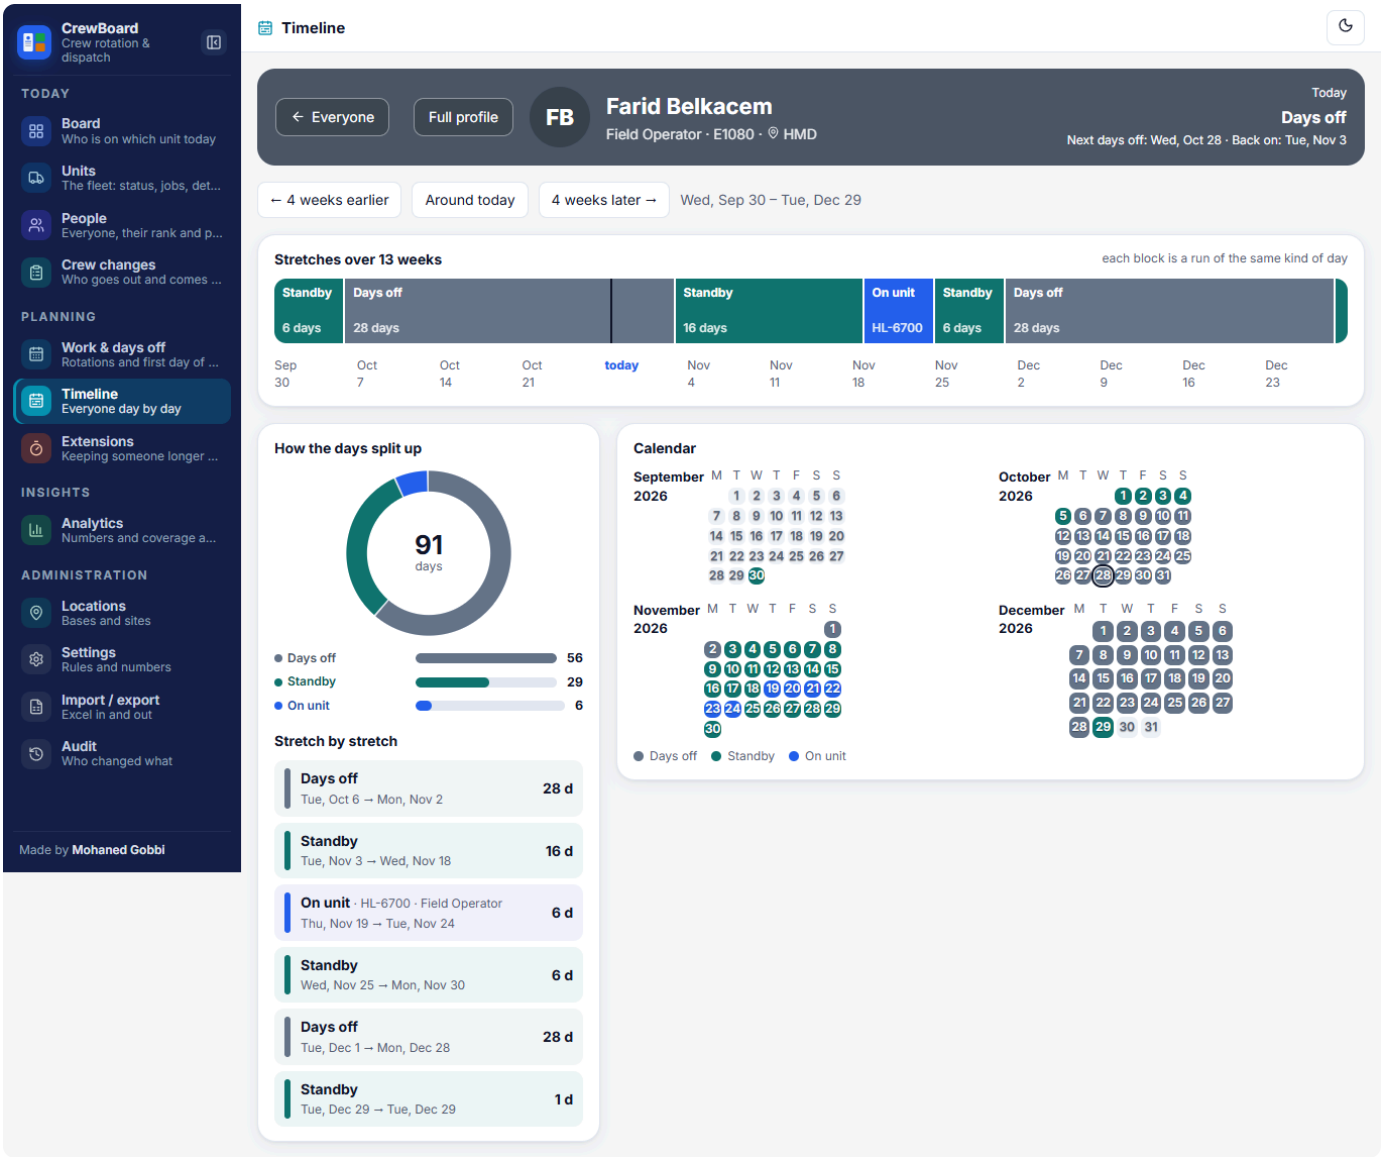

Everyone's next weeks at a glance: one line per person, one colour per kind of day.

One line per person. Blue is days on a unit, teal is standby, grey is days off.

- Narrow the list by **base**, **position** or **name**; **group by unit** to see crews together.
- Move the window with the "4 weeks earlier / 4 weeks later" buttons or jump to "Around today".

One person's timeline

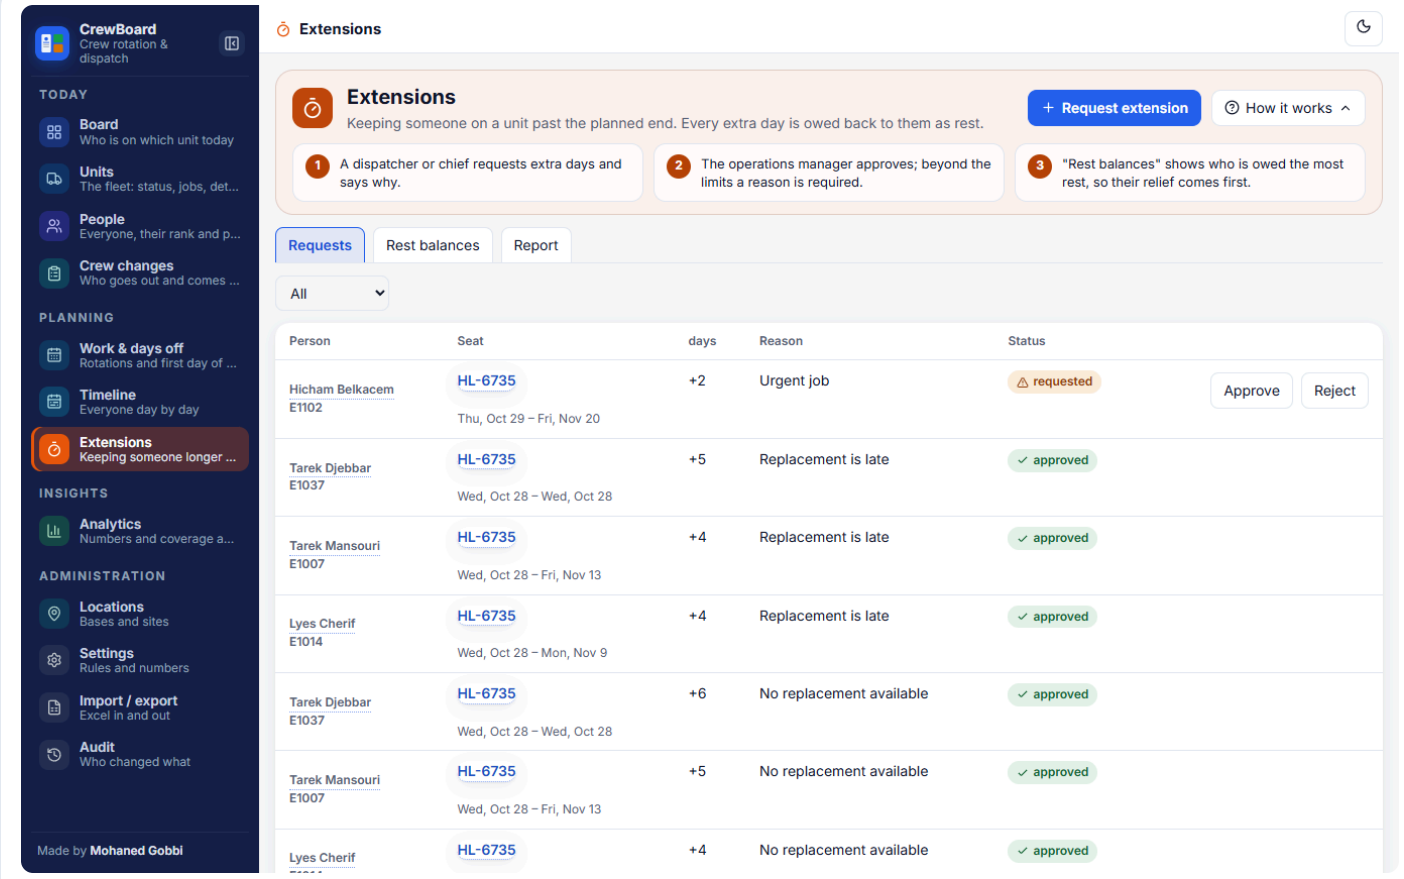

Click a name to see only that person: 13 weeks of stretches, a calendar, how their days split up and each stretch in detail.

Use **Everyone** to go back, or **Full profile** to open the profile panel.

Extensions

Keeping someone on a unit past the planned end. Every extra day is owed back to them as rest.

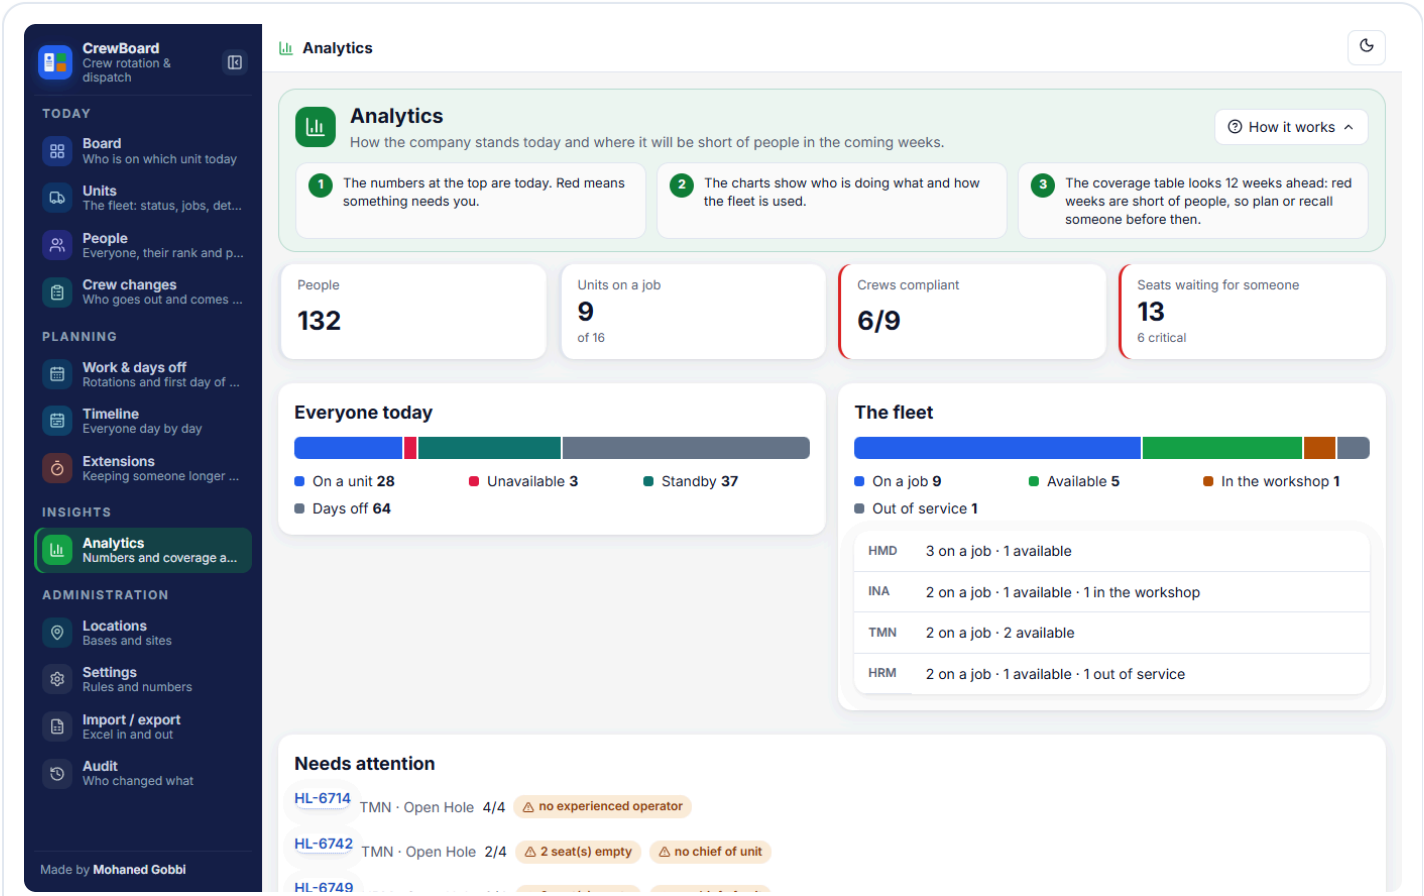

Extensions with the guide open.

1. Press **Extend**, pick the person, the number of extra days and the reason. With approvals on (`workflow.requireApproval` , the default) it is requested, then approved; otherwise it applies at once.
2. Beyond the limits (days per rotation, days per quarter, longest stretch) a reason is required and the override is audited.
3. A stay with no crew change date yet cannot be extended: set a date instead.

4. Extra days are added to the person's balance of rest owed, unless the setting `shiftNextRotationOnExtension` is on, in which case the next rotation starts later instead.

Analytics

How the company stands today and where it will be short of people in the coming weeks. One page, no tabs.

The whole Analytics page.

- **Key numbers** at the top: people, units on a job, crews that follow the rules, seats waiting for someone. A red edge means something needs you.
- **Everyone today** and **The fleet**: simple bars showing what people and units are doing, and the units of each base.
- **Needs attention**: the crews that are incomplete or break a rule. Click a unit code to open it.
- **Coverage, next 12 weeks**: one row per base, one cell per week, showing how many people are available compared with what is needed on the worst day of that week. Green

is covered (100% or more), amber 70 to 99%, red under 70%. The warning above the table names the biggest shortages and when they start.

Tip. Red weeks far ahead are your cue to line someone up or recall someone early, before seats go empty.

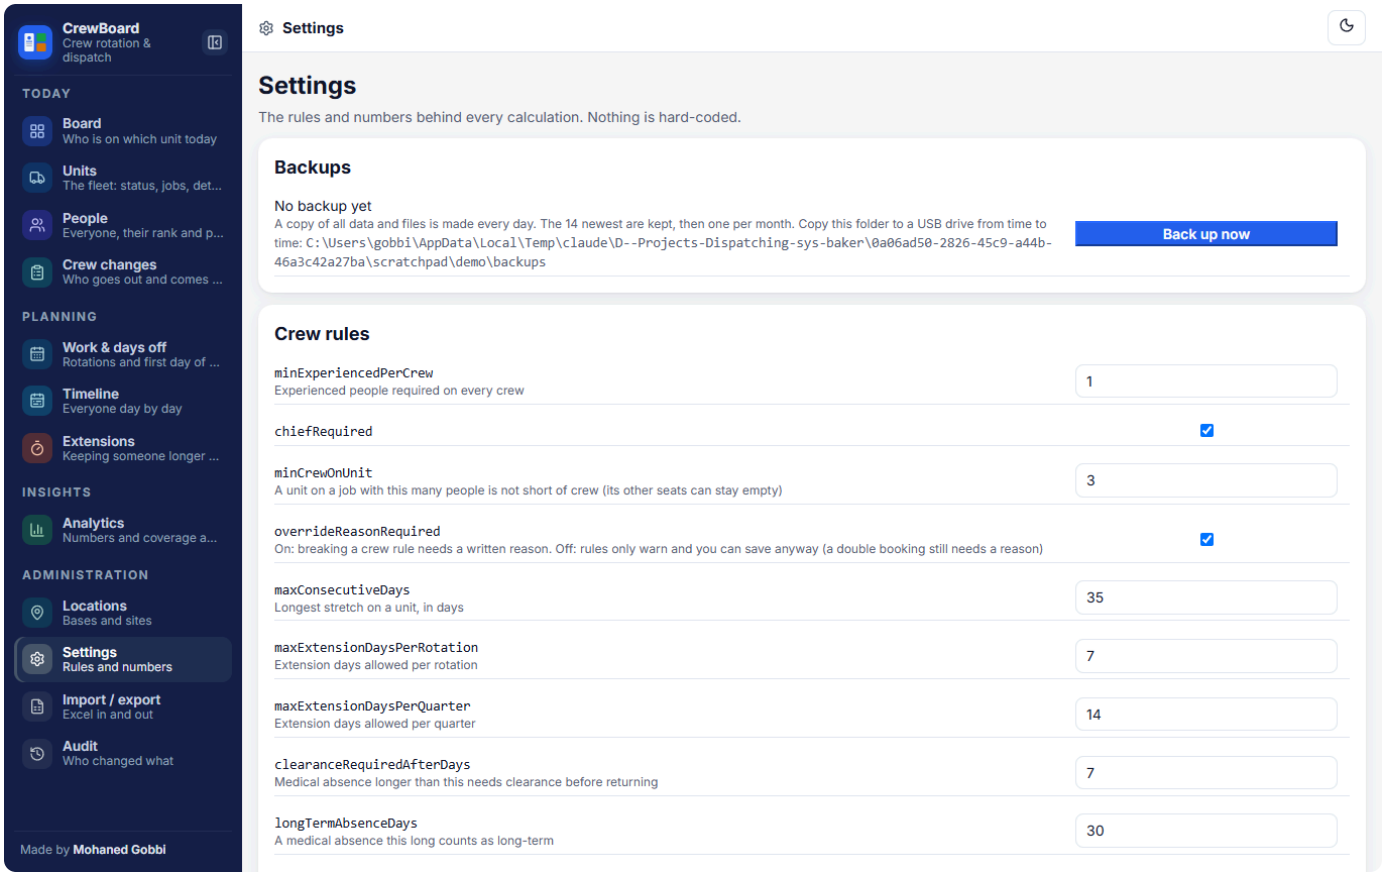

Locations

Your bases and the sites (wells, rigs) your units are sent to.

- A **base** is where trucks and people are based. A base with units or people on it cannot be removed; move them first.
- A **site** belongs to a base and can carry the client, travel time and access notes. Jobs are created at a site.

Settings

The rules and numbers behind every calculation. Nothing is hard-coded.

Crew rules at the top, then the weights used to rank best matches, and more.

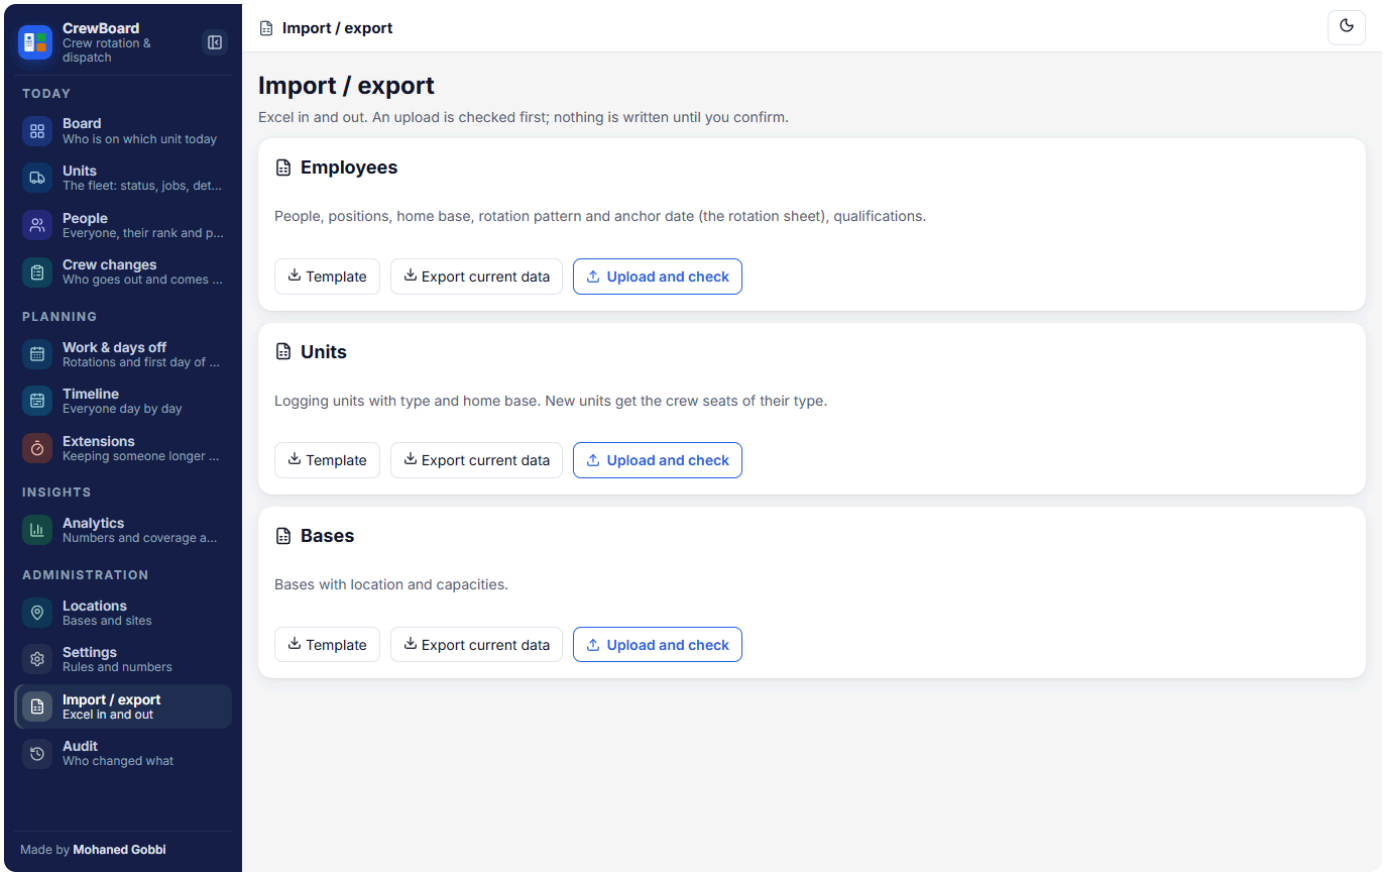

SETTING	WHAT IT DOES
`minCrewOnUnit`	The smallest crew a unit on a job may go out with
`minExperiencedPerCrew`	Experienced people required in every crew
`chiefRequired`	Whether every crew needs a Chief of Unit
`maxConsecutiveDays`	Longest stretch on a unit, in days
`maxExtensionDaysPerRotation` / `PerQuarter`	Extension limits before an override reason is needed
`clearanceRequiredAfterDays`	Medical absence longer than this needs clearance before returning
`longTermAbsenceDays`	A medical absence this long counts as long-term
`shiftNextRotationOnExtension`	On: the next rotation starts later. Off: extra days are owed as rest.
`weight.*`	How much each factor counts when CrewBoard ranks the best matches
`overrideReasonRequired`	On: breaking a hard rule needs a written reason. Off: it is only a warning.
`workflow.requireApproval`	On: extensions are requested, then approved. Off: they apply at once.

Careful. Changes apply immediately to all future calculations and are audited. Change one number at a time and look at the board afterwards.

Backups at the top of Settings: a copy of all data and files is made every day (the 14 newest are kept, then one per month), and **Back up now** makes one straight away. Copy the folder it names to a USB drive from time to time. **About** at the bottom shows the version.

Import / export

Excel in and out. An upload is checked first; nothing is written until you confirm.

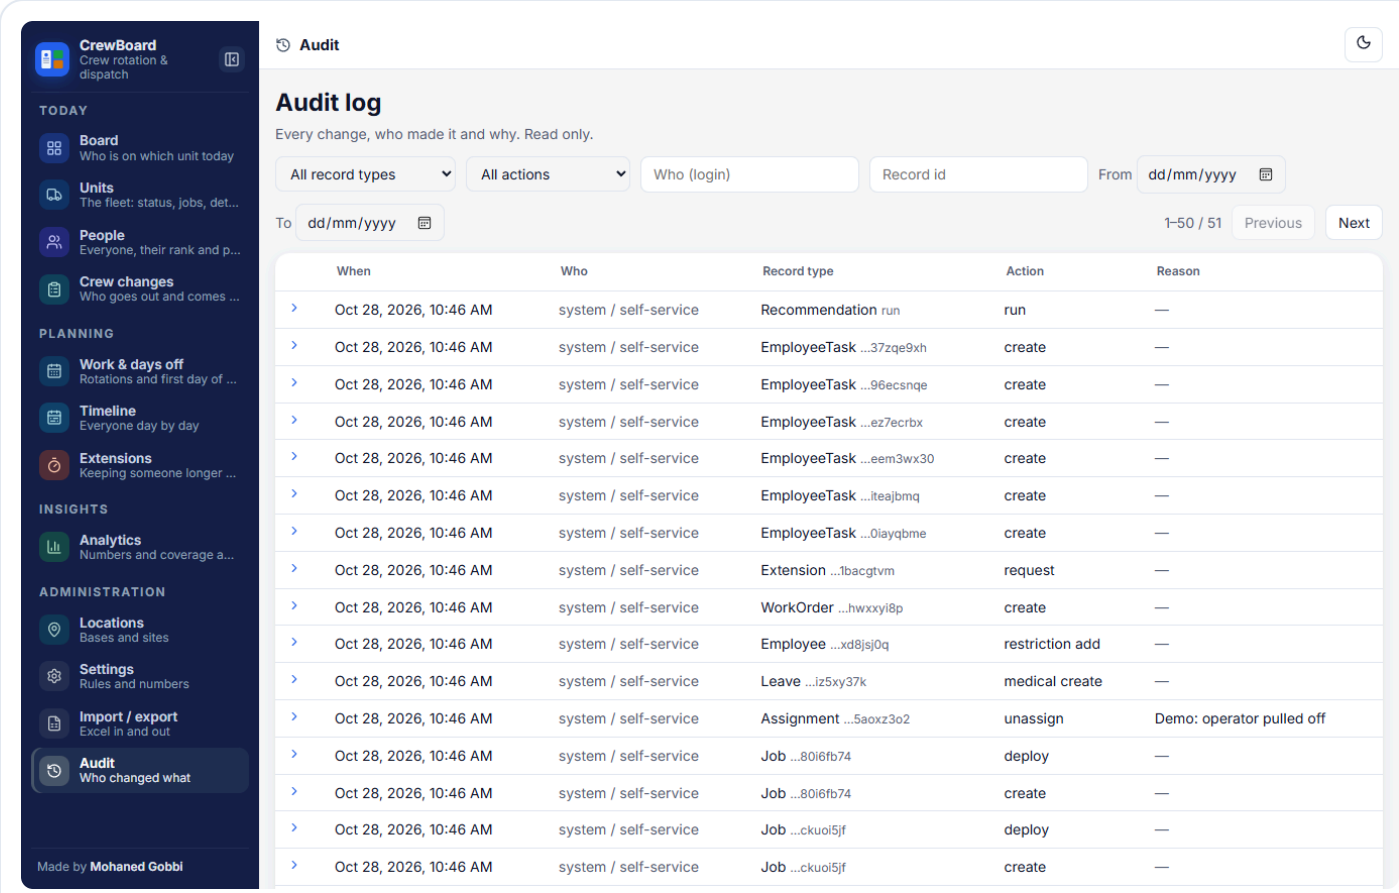

Three kinds of sheet: Employees, Units and Bases.

1. Press **Template** to download an empty Excel sheet with the right columns, or **Export current data** to download what is in CrewBoard now.
2. Fill or edit it, then press **Upload and check**.
3. CrewBoard reports what it would create, change or refuse, row by row. Fix the sheet or press confirm.

Good to know. Blank cells keep the stored value. A unit's type and home base, and archiving people, are refused on purpose because they have their own flows that release seats safely. Certificates, sites and past assignments cannot be imported yet.

Audit

Every change, who made it and why. Read only.

The audit log, newest first.

- Filter by record type, action, record id and dates.
- Open a row (the small arrow) to see exactly what changed and the reason given, for example an override reason on a rule.

How the rules work

Seats and crews

A unit has seats by type: one Chief of Unit and three Field Operators. There is no driver seat; a field operator is the driver. Required seats must be filled; optional ones need not be. A seat is held by one person for a span of dates.

Seniority

Each person is New Recruit, Junior or Experienced according to the field days they have accumulated, including history from before CrewBoard. Crews need a minimum number of Experienced people (setting `minExperiencedPerCrew`) and the star seat on a unit is reserved for one.

Rotation and status

Every person has a rotation pattern and an anchor date (the rotation sheet). From these CrewBoard works out, for each day, one status: *on a unit, standby* or *days off*. Status is never typed in; it is always computed.

Hard and soft rules

- **Hard rules** (qualification, double booking, longest stretch, a crew without a Chief or an experienced member...) stop an assignment unless you give an **override reason**.
- **Soft rules** (rest, fairness, distance, back-to-back stretches) show as warnings and as a lower place in Best matches.
- The same rule check is used by assigning, replacing, swapping, crew change dates and extensions, so screens never disagree about what is allowed.

Rest owed and extensions

An extension adds days to a stretch. Each extra day is owed back to the person as rest, and it counts when Best matches ranks candidates ("rest owed").

Nobody leaves a unit on their own

A stay ends only when you unassign or replace the person, or when someone you lined up takes over. A stay whose end date passes with nobody lined up is kept on the seat and flagged until you act (see Board, "When a stay's end date passes").

Certificates

A certificate is held or not. Certificates do not expire in CrewBoard (a decision made for this deployment), so there are no expiry warnings for them. Unit *papers* (registration, insurance, inspection) do have expiry dates.

Colours and labels

COLOUR	MEANING
Red, solid	Act now: short crews, critical or overdue gaps, base below minimum, overdue service, expired papers.
Green	Open Hole units; OK / covered.
Amber	Cased Hole units; caution.
Blue	On a unit / on a job; links and primary buttons.
Teal	Standby
Slate grey	Days off; units at base without a job; out of service
Orange	The workshop

Colour is never the only signal: every state also has a text label or icon.

Running and setting up

Installing

Run `CrewBoard Setup 1.0.0.exe` (built with `npm run dist` in the `desktop` folder of the project). It installs for the current Windows user and needs nothing else: no database server, no browser, no Node.

Where the data is

Everything is in `%APPDATA%\CrewBoard\data`: the database (`crewboard.db`), the uploaded files and the daily backups. Uninstalling CrewBoard keeps this folder. To move to another computer, install CrewBoard there and copy this folder over before opening it.

From the source code

Developers can run it from the source code without installing: see the README of the project.

Questions and fixes

PROBLEM	WHAT TO DO
Someone is sick or away and cannot work.	Click them on the board (or in the unit or their profile), then Unassign, or Replace to put someone else in straight away. Add the reason if you like; it goes in the audit log.
A unit shows "1 stay ended: unassign".	The person's end date passed and they are still on the seat. Unassign or Replace them, or Set date for a new crew change.
Someone with no crew change date is not in Crew changes.	Expected: no handover is planned. Set a date from the seat.
I cannot assign someone to a seat.	Read the reason shown: a hard rule stops it (qualification, already booked, longest stretch...). Choose someone else, or give an override reason if you accept the risk.
A person is missing from "Best matches".	Open *Why others were ruled out*. They may be on days off, already on another seat, unqualified, or would break a rule.
A unit shows "In the workshop" and I did not do that.	A preventive service came due and opened a workshop visit. Press Repaired on the unit when it is back.
A unit cannot be deleted.	It has history (crew, jobs or workshop visits). Use Out of service.
The board looks out of date.	It refreshes after every change you make; press Ctrl+R to reload it.
I want to know who changed something.	Open Audit and filter by record type or person.

Glossary

TERM	MEANING
Unit	A truck / rig that works on jobs with a crew
Open Hole (OH) / Cased Hole (CH)	The two kinds of unit and work
Seat	One position in a crew, held by one person for a span of days
Base	A home location (for example HRM, HMD, INA, TMN) with units and staff
Job	A piece of work at a site with dates; units are deployed on it
Crew change	The day one person leaves a seat and another arrives
Standby	Available at base, not assigned to a unit
Override	Allowing an action that breaks a hard rule, with a reason that is recorded
Not decided yet	A stay with no crew change date; the person stays until you set one or unassign them
Stay ended	A stay whose end date passed while the person is still on the seat; waits for you to act
Rest owed	Days a person is owed after extensions

CrewBoard is made by **Mohaned Gobbi**. © 2026 Mohaned Gobbi.

The screenshots were taken from the running platform on the demo data. They can be regenerated with `npx playwright test -c playwright.manual.config.ts` in `apps/web` (see docs/manual/README.md).
